REST API Clients

This article has been generated from the online version of the documentation and might be out of date. Please, make sure to always refer to the online version of the documentation for the up-to-date information.

Auto-generated at February 16, 2026

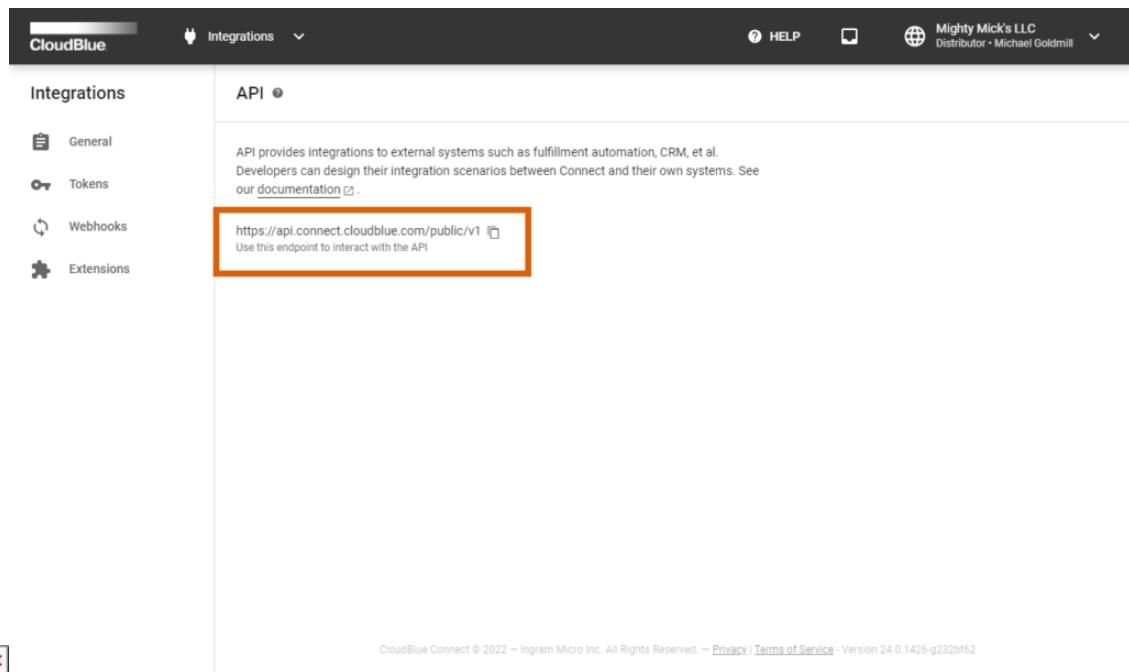

REST API clients represent software applications and platforms that can be used to work with the Connect API. Download Open API specification for your client by using the following link:

[Open API 3.0 compatible specification](#)

Note that each client also requires operators to generate a token and to specify correct API endpoint as described below.

API Endpoint

Navigate to the **Integrations** module on the Connect platform and access your *API endpoint* via the **General** tab:

The screenshot shows the CloudBlue Connect interface. At the top, there is a navigation bar with the CloudBlue logo, a search bar, and links for 'Integrations', 'HELP', and 'Mighty Mick's LLC'. The main content area has a sidebar on the left with 'Integrations' selected, showing sub-options: 'General', 'Tokens', 'Webhooks', and 'Extensions'. The main panel is titled 'API' and contains a description: 'API provides integrations to external systems such as fulfillment automation, CRM, et al. Developers can design their integration scenarios between Connect and their own systems. See our documentation.' Below this is a text box with the API endpoint URL: 'https://api.connect.cloudblue.com/public/v1' with a copy icon. The URL is highlighted with a red box. At the bottom of the main panel, there is a footer note: 'CloudBlue Connect © 2022 – Ingram Micro Inc. All Rights Reserved. – [Privacy](#) | [Terms of Service](#) - Version 24.0.1426-g232bf62'.

Specifying the correct API endpoint is essential for your REST API client configuration. Use the corresponding button on the interface to copy the endpoint.

Token Creation

Generating a token on the Connect platform and assigning permissions to your token is another important operation for working with the API. Proceed to the **Tokens** tab of the Integrations module to create a new token:

The screenshot shows the CloudBlue Connect interface for managing API tokens. The top part is the 'Edit token' screen, where you can select permissions for a token. The bottom part is the 'Token details' screen, which shows the generated token information and its usage.

Edit token (Permissions Screen):

Module	Description	Granted
All	All modules	✓
Account	Manage users, groups, permissions, and account settings of your organization with the Account	✓
Agreements	Create and control the lifecycle of agreements (contract templates) with the Agreements	✓
Catalog	View, enroll, test and manage the portfolio of products with the Catalog Management module	✓
Contracts	Create and manage contracts with your partners with the Contracts Management module	✓
Customers	View and manage your customers (tier accounts) with the Customers Management module	✓
Integrations	Create and manage API tokens, access information, and other integrations with the Integrations	✓
Forms	Add, edit, and manage forms for collecting additional data within product enrollment with the	✓
Helpdesk	Set, manage and update the cases with Helpdesk Management module.	✓

Token details (General Screen):

Status	ID	Extension
Active	REST API Token SU-812-241-906	custom EXT-000

Token details (Permissions Screen):

API Key/Handle

Custom Integration

Token details (Bottom):

Created	Updated
07/02/2022 11:05	07/02/2022 11:05
Stanislav Nikiforov (UR-149-860-972)	

Select *Custom* extension to create a token for your REST API client. Specify required permissions for your token via the token creation wizard or by editing your token via the Token Details screen.

Once your new custom token is generated successfully, access the Token Details screen to copy your *API Key/Handle* value. Thereafter, you can start working with your REST API client.

Configuration Instructions

Proceed to one of the following articles to access configuration guidelines and additional information on recommended REST API clients:

1. Postman
2. Insomnia
3. Paw
