# REST API Clients

This article has been generated from the online version of the documentation and might be out of date. Please, make sure to always refer to the online version of the documentation for the up-to-date information.

Auto-generated at July 27, 2024

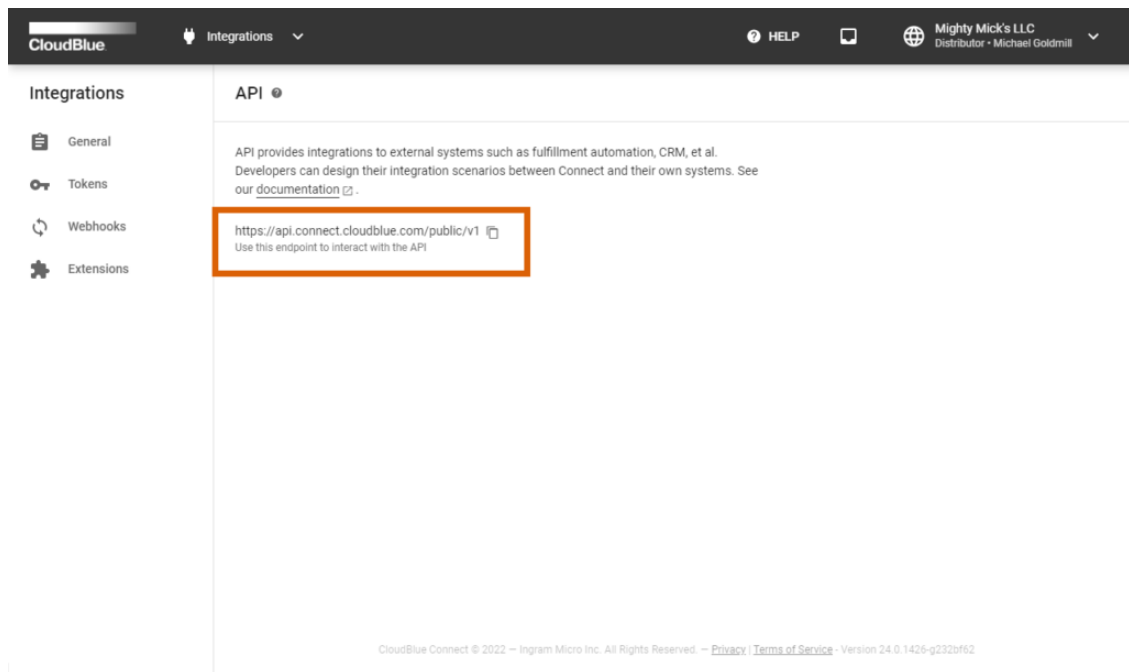

REST API clients represent software applications and platforms that can be used to work with the Connect API. Download Open API specification for your client by using the following link:

Open API 3.0 compatible specification

Note that each client also requires operators to generate a token and to specify correct API endpoint as described below.

## API Endpoint

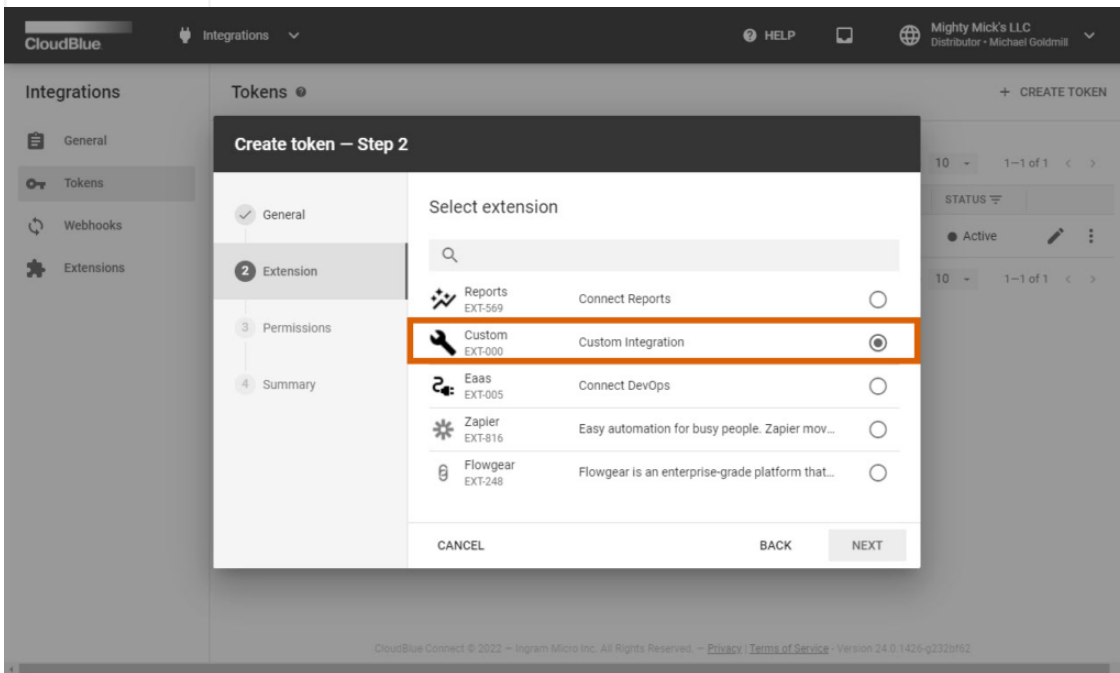

Navigate to the **Integrations** module on the Connect platform and access your *API endpoint* via the **General** tab:

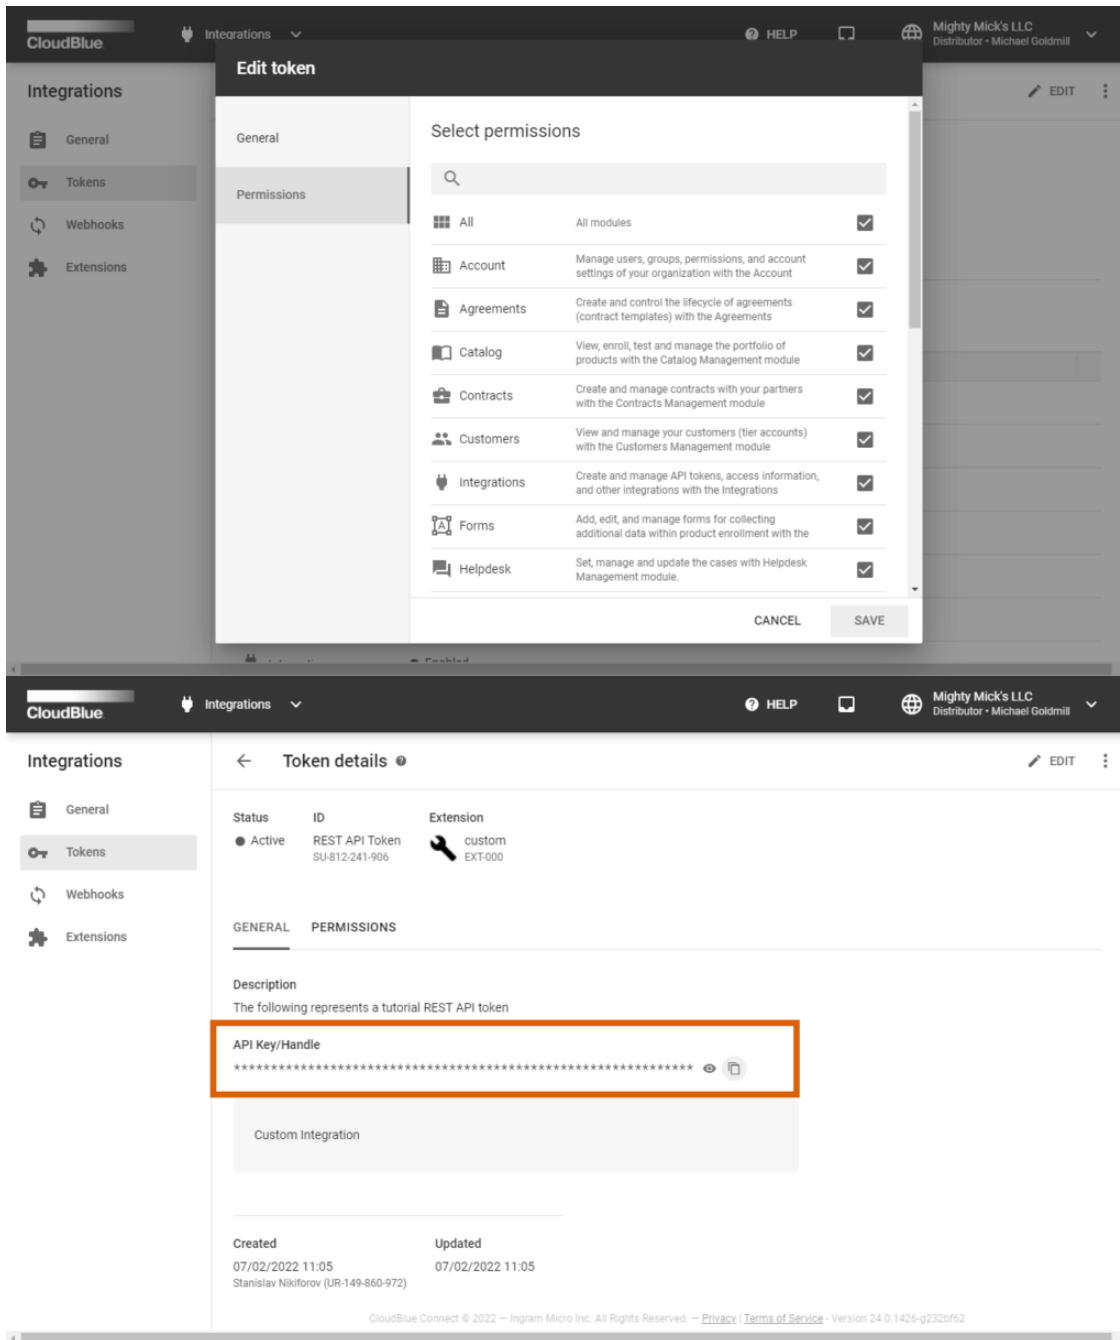

Specifying the correct API endpoint is essential for your REST API client configuration. Use the corresponding button on the interface to copy the endpoint.

## Token Creation

Generating a token on the Connect platform and assigning permissions to your token is another important operation for working with the API. Proceed to the **Tokens** tab of the Integrations module to create a new token:

The image shows two screenshots from the CloudBlue interface. The top screenshot is the 'Edit token' dialog, which has a 'Select permissions' modal open. The modal lists various modules with checkboxes for selection:

Module	Description	Selected
All	All modules	<input checked="" type="checkbox"/>
Account	Manage users, groups, permissions, and account settings of your organization with the Account	<input checked="" type="checkbox"/>
Agreements	Create and control the lifecycle of agreements (contract templates) with the Agreements	<input checked="" type="checkbox"/>
Catalog	View, enroll, test and manage the portfolio of products with the Catalog Management module	<input checked="" type="checkbox"/>
Contracts	Create and manage contracts with your partners with the Contracts Management module	<input checked="" type="checkbox"/>
Customers	View and manage your customers (tier accounts) with the Customers Management module	<input checked="" type="checkbox"/>
Integrations	Create and manage API tokens, access information, and other integrations with the Integrations	<input checked="" type="checkbox"/>
Forms	Add, edit, and manage forms for collecting additional data within product enrollment with the	<input checked="" type="checkbox"/>
Helpdesk	Set, manage and update the cases with Helpdesk Management module.	<input checked="" type="checkbox"/>

The bottom screenshot shows the 'Token details' screen for a REST API Token. The token is active and associated with the 'custom' extension. The 'API Key/Handle' field is highlighted with an orange box, showing a masked value with a copy icon.

**Token details:**

- Status: Active
- ID: REST API Token SU-812-241-906
- Extension: custom EXT-000
- Description: The following represents a tutorial REST API token
- API Key/Handle: [Masked]
- Created: 07/02/2022 11:05 (Stanislav Nikiforov (UR-149-860-972))
- Updated: 07/02/2022 11:05

Select *Custom* extension to create a token for your REST API client. Specify required permissions for your token via the token creation wizard or by editing your token via the Token Details screen.

Once your new custom token is generated successfully, access the Token Details screen to copy your *API Key/ Handle* value. Thereafter, you can start working with your REST API client.

## Configuration Instructions

Proceed to one of the following articles to access configuration guidelines and additional information on recommended REST API clients:
