v44 Release Notes

This article has been generated from the online version of the documentation and might be out of date. Please, make sure to always refer to the online version of the documentation for the up-to-date information.

Auto-generated at September 9, 2026

Release Date: **September 9, 2026**

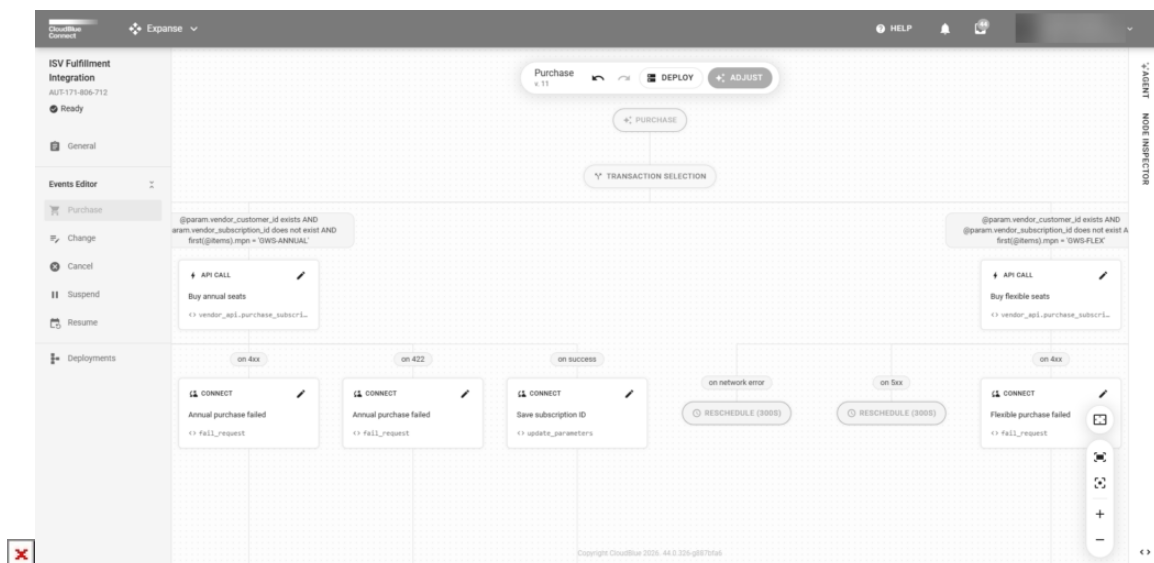

This release brings new and enhanced features, better scalability, smoother workflows, and a richer user experience on CloudBlue Connect®.

1. CloudBlue Connect® Platform

1.1 New Expanse Module

Expanse is the new Connect module that lets Vendors integrate with their API-driven products live without writing integration code. Simply configure the OpenAPI endpoint (or API YAML file), and the Expanse agent drafts a complete fulfillment flow for the product's subscription lifecycle events.

The user stays in control the whole way: review the integration as an easy-to-read visual flow and fine-tune it in plain English.

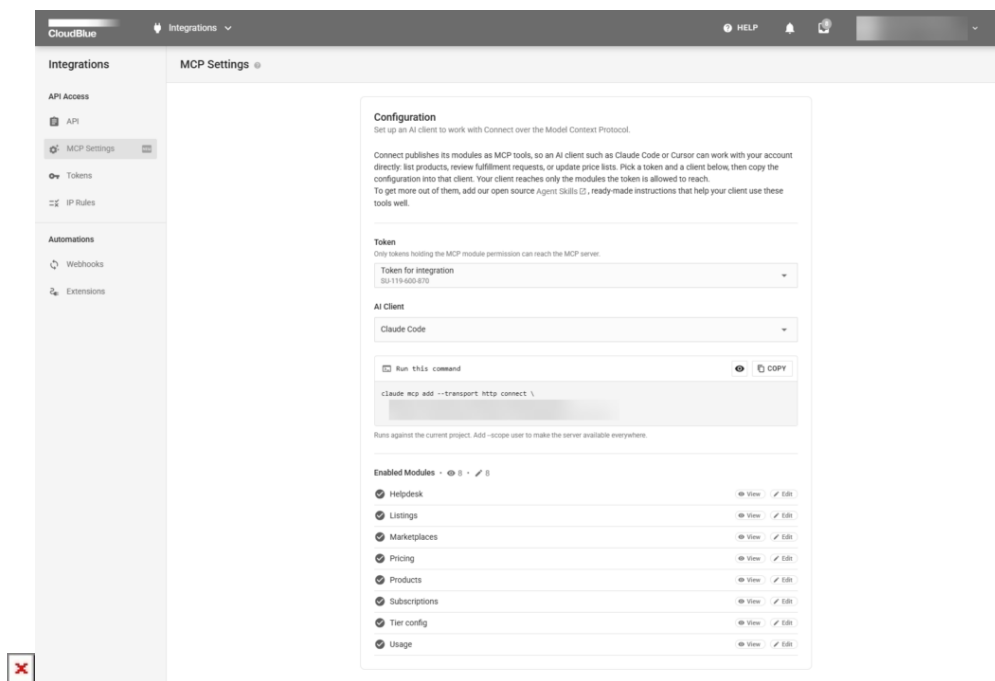

When ready, launch through the built-in preview, test, and production environments – and if needed – and roll back instantly with a single click. What used to take weeks of development now takes hours, opening the door for more opportunities in the channel.

Read more about the new Expanse Module here.

1.2 CloudBlue Connect MCP

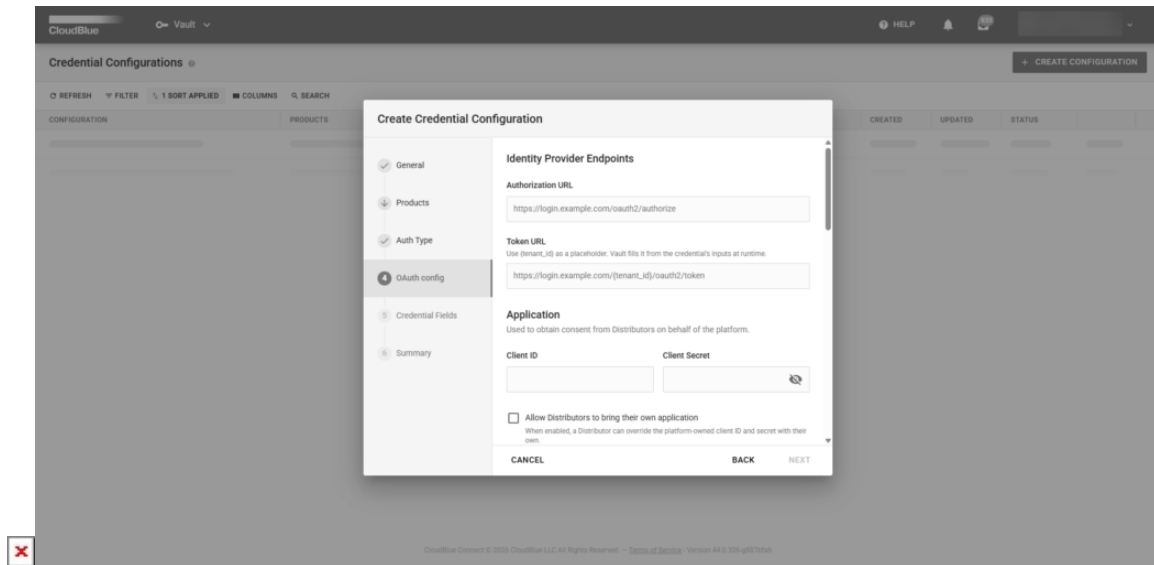

CloudBlue Connect now exposes its modules through the Model Context Protocol (MCP), letting customers' AI agents securely query and act on Connect data using a standardized, discoverable set of tools. Each MCP server acts as a bridge to Connect's existing REST APIs, so agents can carry out real multi-step workflows (such as looking up products, pricing, or listings) through natural language.

Read more about the new Connect MCP here.

1.3 OAuth 2.0 Support in Vault

The Connect Vault module now supports OAuth 2.0 as a credential type, alongside the existing static credentials (API keys, bearer tokens, et al.).

Read more about Credentials Vault here.

1.4 Support for Scheduled / Delayed Dynamic Validation

CloudBlue Connect® now supports scheduled / delayed dynamic order validation for channel operations that require future time-sensitive validation before processing and approving the request. This change is also reflected within the portal subscription wizard.

1.5 Performance & Security Updates

We have enhanced multiple aspects of our platform to boost performance, optimize operational efficiency, and strengthen security across various areas.

2. CloudBlue Connect® Extensions

2.1 AWS Hyperscaler Marketplace Concurrent Agreements

The CloudBlue Connect® AWS Marketplace Integration now supports concurrent agreements, allowing customers to have multiple agreements with the same vendor from the same account.

2.2 Azure Hyperscaler Marketplace Improvements and Security Updates

We have enhanced our Microsoft Azure Hyperscaler Marketplace Integration to better support custom private offers provisioning and acceptance.
