Azure Active Directory

This article has been generated from the online version of the documentation and might be out of date. Please, make sure to always refer to the online version of the documentation for the up-to-date information.

Auto-generated at February 12, 2026

Azure Active Directory represents an Identity and Access Management as a service (IDaaS) solution that can be used as your Single Sign-On domain on the CloudBlue Connect platform.

The following provides instructions on how to deploy your configured Azure Active Directory on the Connect platform. The guidelines below also showcase how to create a new Active Directory on the Microsoft Azure portal, how to successfully configure your Azure enterprise application, and more.

Active Directory Creation

Create your Azure Active Directory via the Microsoft Azure Portal as described below. Skip to Connect Domain Verification in case your Active Directory and custom domain are already configured on the Microsoft Azure portal.

By creating an Active Directory, the Microsoft Azure portal requires you to specify your tenant details. A tenant represents an organization and dedicated instance of Azure AD. The following steps showcase how to successfully create a new Azure Active Directory and configure your new tenant:

Step 1

Step 2

Step 3

Step 4

Step 5

Step 6

1. Click the **Create New Resource** button from the **Microsoft Azure** portal.
2. Locate *Azure Active Directory* from the provided list.

3. Click the **Create** button once Azure Active Directory is located successfully.
4. The portal prompts you to select a tenant type. Specify your required type and click **Next: Configuration** to continue.
5. Specify your organization name, initial domain name, and country/region in the following **Configuration** form. Click **Next: Review + create** to continue.
6. Once your configured tenant validation is passed, click the **Create** button to finalize your Active Directory creation.

Therefore, the Azure portal starts to process your tenant configuration. In case this processing is successfully complete, the Azure portal allows you to access your created Active Directory.

Azure Custom Domain

Verify your domain name within your Azure Active Directory. Skip to Connect Domain Verification in case your custom domain is already configured on the Microsoft Azure portal.

Follow the steps below to add your custom domain to your Azure Active Directory and successfully verify it.

Step 1

Step 2

Step 3 & 4

1. Access the **Custom Domain Names** section from the left-hand panel of your created Azure Active Domain.
2. Click the **Add custom domain** button to specify your domain name.
3. Enter your domain to the appeared form and click the **Add domain** button.
4. The Azure portal prompts you to specify create a new TXT record with your domain name registrar using the provided information. Click **Verify** once your TXT with required information is successfully created.

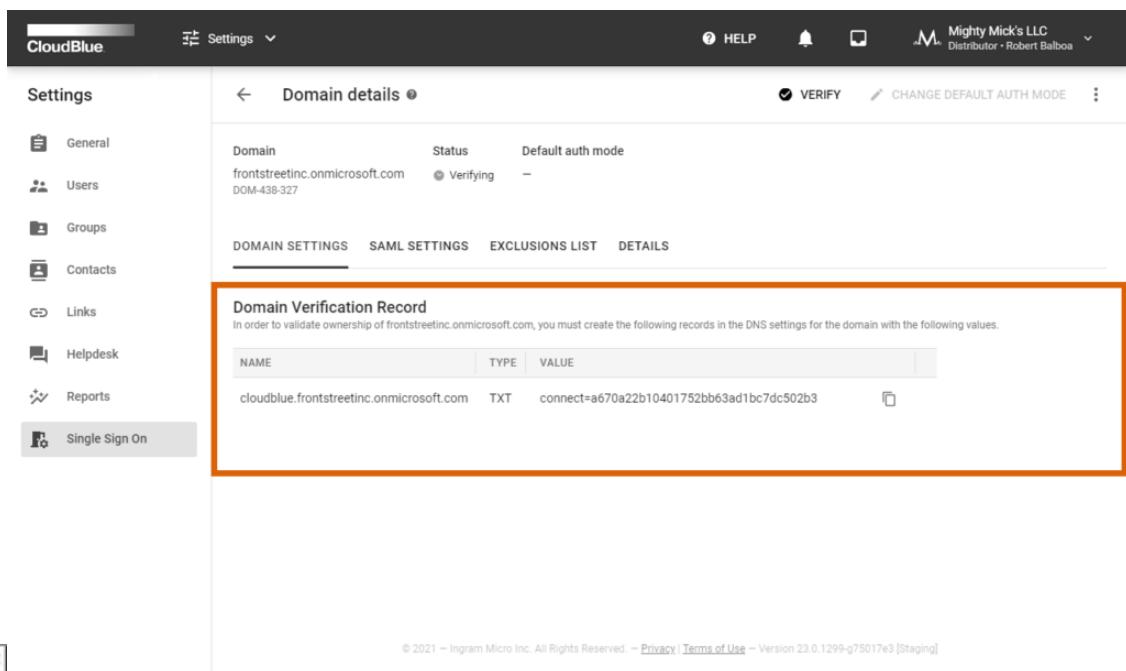

As a result, the Azure portal starts to process your domain configuration. If this processing is complete, the Azure portal will successfully verify your added domain.

Connect Domain Verification

Create a domain on the CloudBlue Connect platform. Once your domain instance is created, Connect prompts users to create a

domain verification record via the domain details screen.

Create an Azure Active Directory record set with required data as follows:

CloudBlue Settings Domain details

Domain: frontstreetinc.onmicrosoft.com Status: Verifying Default auth mode: DOM-438-327

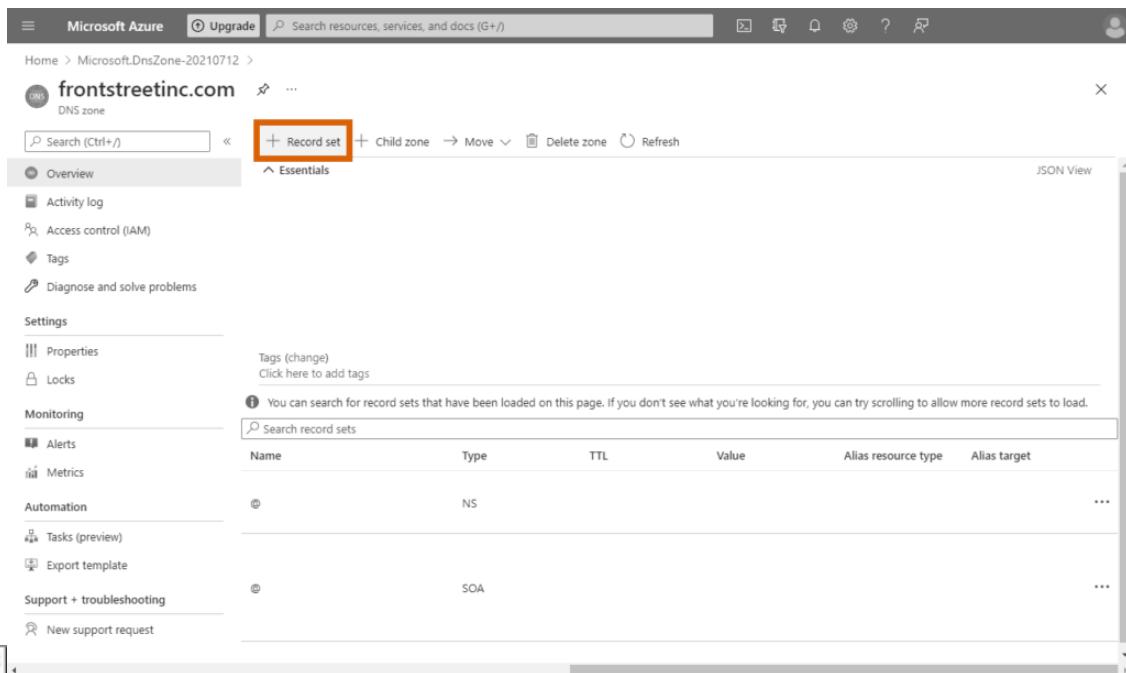

Domain Verification Record

In order to validate ownership of frontstreetinc.onmicrosoft.com, you must create the following records in the DNS settings for the domain with the following values.

NAME	TYPE	VALUE
cloudblue.frontstreetinc.onmicrosoft.com	TXT	connect=a670a22b10401752bb63ad1bc7dc502b3

© 2021 – Ingram Micro Inc. All Rights Reserved. – [Privacy](#) | [Terms of Use](#) – Version 23.0.1299-g75017e3 [Staging]

Step 1

Microsoft Azure

frontstreetinc.com DNS zone

+ Record set

Name	Type	TTL	Value	Alias resource type	Alias target
@	NS				
@	SOA				

Step 2

Microsoft Azure [Upgrade](#) [Search resources, services, and docs \(G+\)](#)

Add record set

frontstreetinc.com

Name: `cloudblue.frontstreetinc.onmicrosoft.com` [DNS zone](#)

Type: `TXT - Text record type`

TTL *: `1` TTL unit: `Hours`

Value:

`connect=a670a22b10401752bb63ad1bc7dc502b3` [DNS zone](#)

The quick brown fox jumps over the lazy dog.

OK

Step 3 & 4

CloudBlue [Settings](#)

Mighty Mick's LLC Distributor - Robert Balboa

Settings

General [Users](#) [Groups](#) [Contacts](#) [Links](#) [Helpdesk](#) [Reports](#) [Single Sign On](#)

Domain details

Domain: `frontstreet.onmicrosoft.com` Status: `Verifying` Default auth mode: `-`

DOMAIN SETTINGS [SAML SETTINGS](#) [EXCLUSIONS LIST](#) [DETAILS](#)

Domain Verification Record

In order to validate ownership of `frontstreet.onmicrosoft.com`, you must create the following records in the DNS settings for the domain with the following values.

NAME	TYPE	VALUE
<code>cloudblue.frontstreet.onmicrosoft.com</code>	TXT	<code>connect=a670a22b10401752bb63ad1bc7dc502b3</code>

© 2021 - Ingram Micro Inc. All Rights Reserved. - [Privacy](#) | [Terms of Use](#) - Version 23.0.1299-g75017e3 [Staging]

Step 5

1. Copy your provided domain and value from the **Domain Settings** tab on Connect.
2. Create a new **Record Set** within the DNS zone section on the Microsoft Azure portal.

3. Paste your copied domain and value to the appeared form. Note that it is also necessary to specify a record type as displayed within *Domain Settings* on Connect.
4. Click **OK** to save your record configurations.
5. Verify your domain on the Connect platform by clicking the **Verify** button at the top right corner of your domain details screen.

Thus, the system should successfully verify your domain instance on the Connect platform. Note, however, that sometimes DNS changes can take a while to appear. Please wait a few hours, then reopen your domain instance and try to verify it again. In case the verification operation keeps failing, try to add a different DNS TXT record and make sure that all provided values are correct.

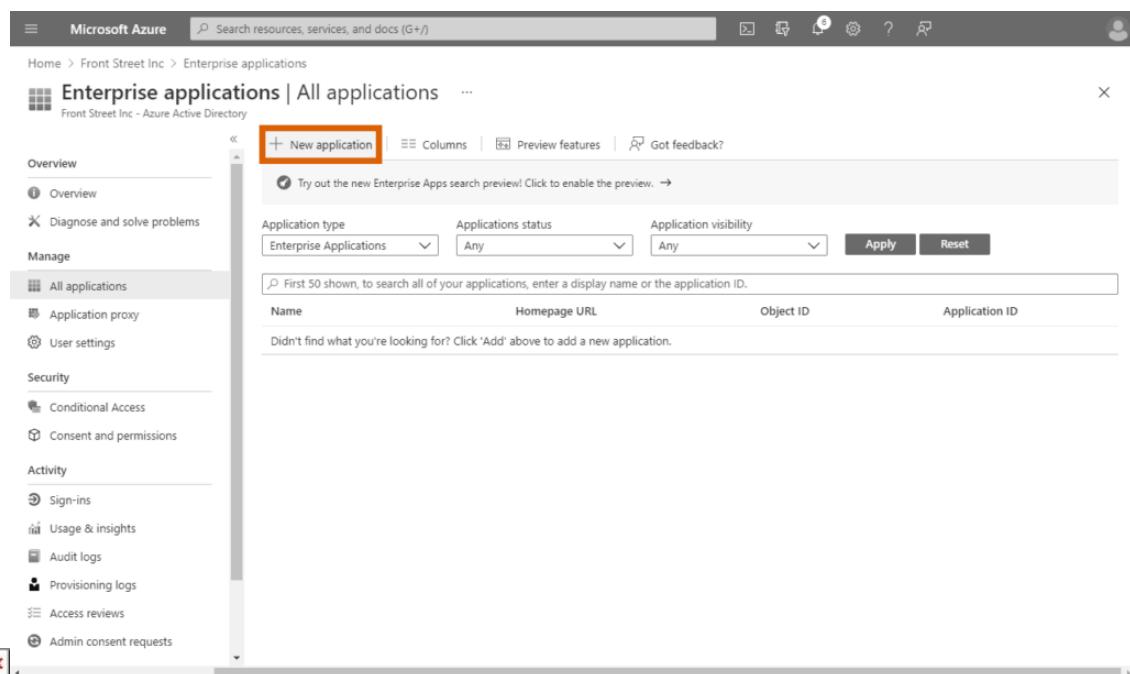

One Domain & Multiple Accounts

In case you have the same domain for two different Connect accounts (e.g., one domain for Vendors and Distributors), it is required to add two DNS records for each domain instance on the Connect platform.

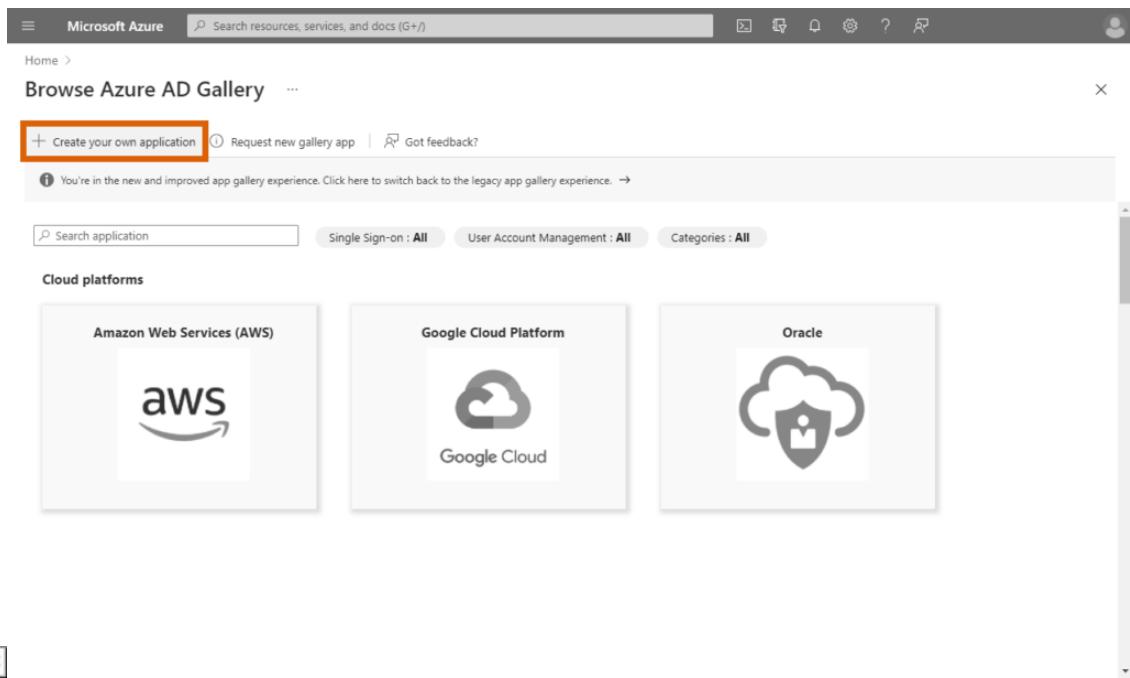

Enterprise Application

In case your Active Directory is successfully configured and your domain is successfully on the Connect platform, it is necessary to define your single sign-on system via the *Enterprise applications* section on the Microsoft Azure portal and upload your Connect *Service Provider* metadata and certificate files to the Azure portal. The following instructions showcase how to perform the aforementioned operations:

The screenshot shows the Microsoft Azure portal interface. The top navigation bar includes the Microsoft Azure logo, a search bar, and various navigation icons. The main title is 'Enterprise applications | All applications'. The left sidebar has sections for Overview, Manage (with 'All applications' selected), Security, and Activity. The main content area shows a table with columns for Name, Homepage URL, Object ID, and Application ID. A search bar at the top of the table says 'First 50 shown, to search all of your applications, enter a display name or the application ID.' A note below the search bar says 'Didn't find what you're looking for? Click 'Add' above to add a new application.' At the top of the main content area, there is a button labeled '+ New application' with a red box drawn around it. Below this are filters for Application type (Enterprise Applications), Applications status (Any), and Application visibility (Any), with 'Apply' and 'Reset' buttons. There is also a 'Preview features' and 'Got feedback?' link.

Step 1

Microsoft Azure ... Home > Browse Azure AD Gallery ... X

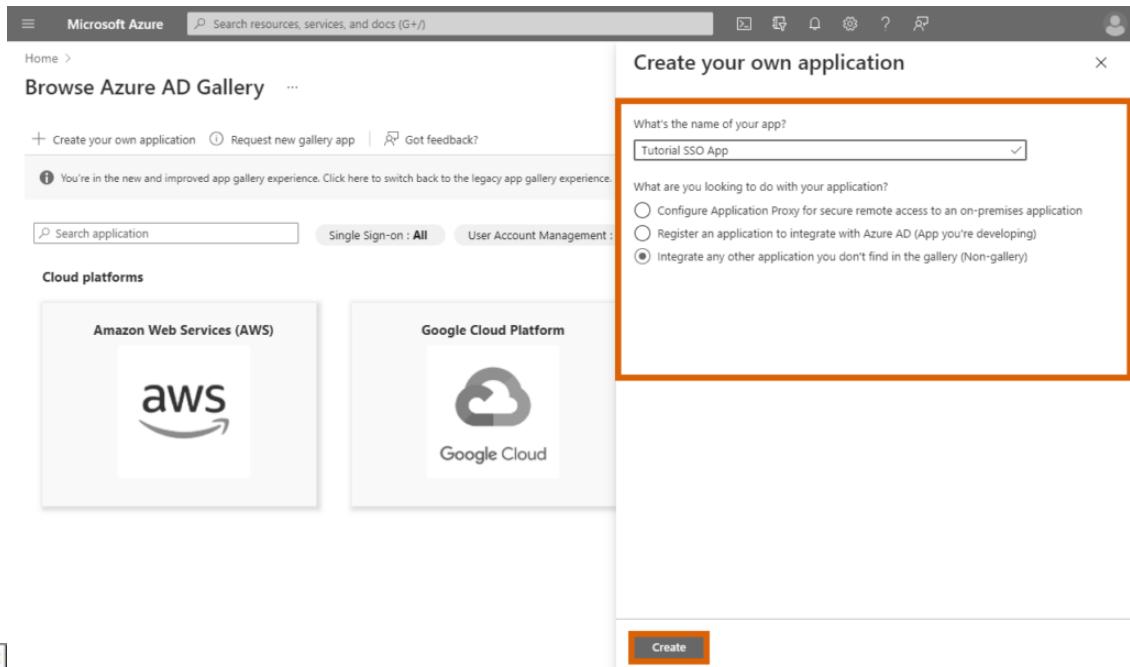

💡 You're in the new and improved app gallery experience. Click here to switch back to the legacy app gallery experience. →

Single Sign-on : All User Account Management : All Categories : All

Cloud platforms

- [Amazon Web Services \(AWS\)](#) 
- [Google Cloud Platform](#) 
- [Oracle](#) 

Step 2

Microsoft Azure ... X

Home > Browse Azure AD Gallery ...

💡 You're in the new and improved app gallery experience. Click here to switch back to the legacy app gallery experience.

Single Sign-on : All User Account Management : All

Create your own application

What's the name of your app?

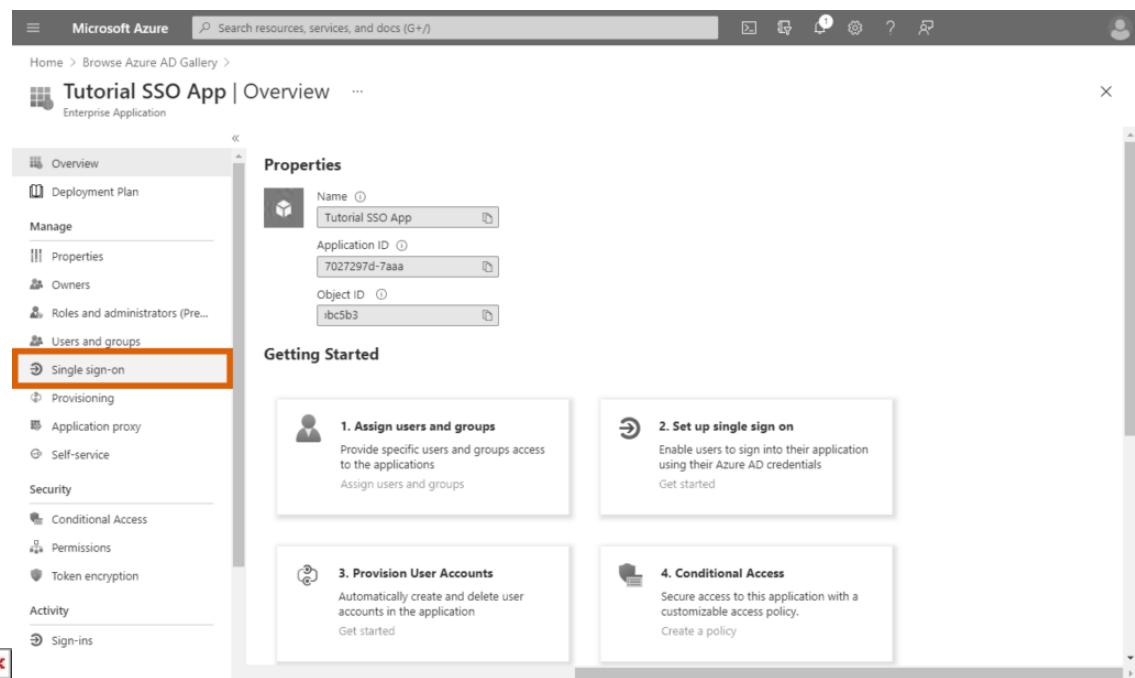

What are you looking to do with your application?

Configure Application Proxy for secure remote access to an on-premises application

Register an application to integrate with Azure AD (App you're developing)

Integrate any other application you don't find in the gallery (Non-gallery)

Step 3

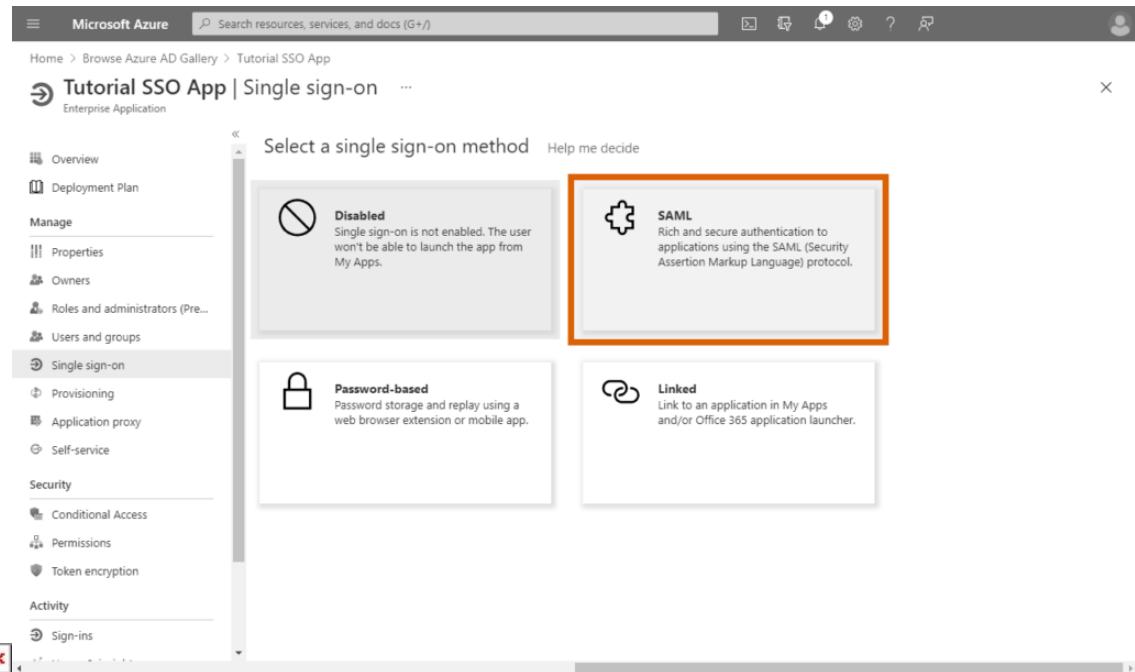

Properties

Name: Tutorial SSO App
Application ID: 7027297d-7aaa
Object ID: 1bc5b3

Getting Started

1. Assign users and groups
2. Set up single sign on
3. Provision User Accounts
4. Conditional Access

Step 4

Select a single sign-on method

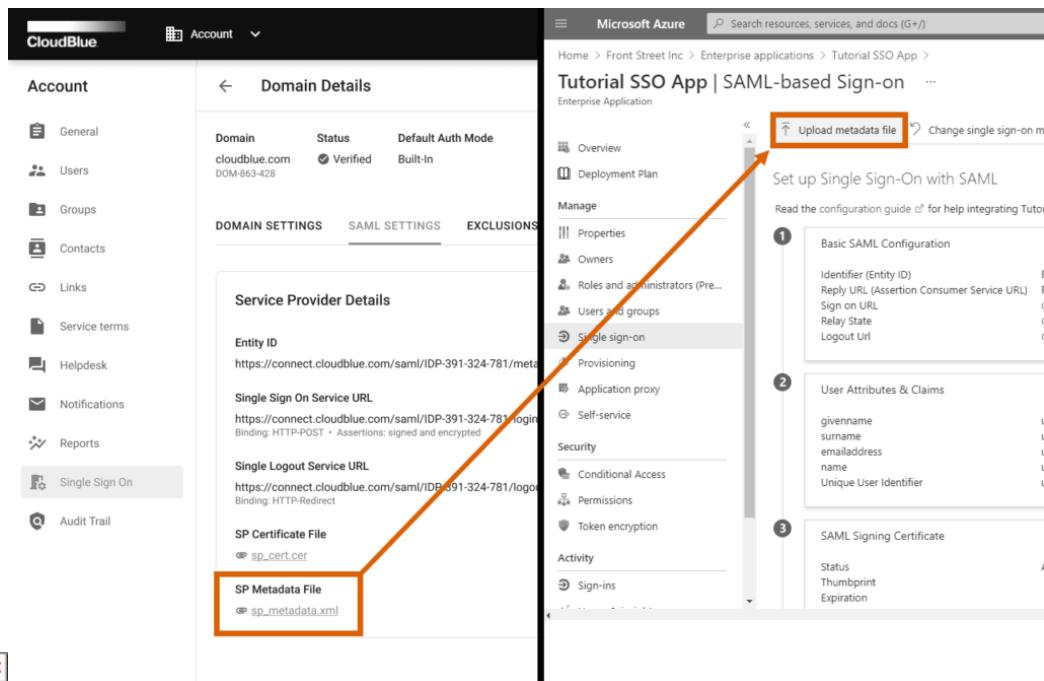

Disabled: Single sign-on is not enabled. The user won't be able to launch the app from My Apps.

SAML: Rich and secure authentication to applications using the SAML (Security Assertion Markup Language) protocol.

Password-based: Password storage and replay using a web browser extension or mobile app.

Linked: Link to an application in My Apps and/or Office 365 application launcher.

Step 5

CloudBlue Account - Domain Details

Domain: cloudblue.com, Status: Verified, Default Auth Mode: Built-In

Service Provider Details

- Entity ID: <https://connect.cloudblue.com/saml/IDP-391-324-781/metadata>
- Single Sign On Service URL: <https://connect.cloudblue.com/saml/IDP-391-324-781/login>
- Single Logout Service URL: <https://connect.cloudblue.com/saml/IDP-391-324-781/logout>
- SP Certificate File: [sp_cert.cer](#)
- SP Metadata File: [sp_metadata.xml](#)

Microsoft Azure - Tutorial SSO App | SAML-based Sign-on

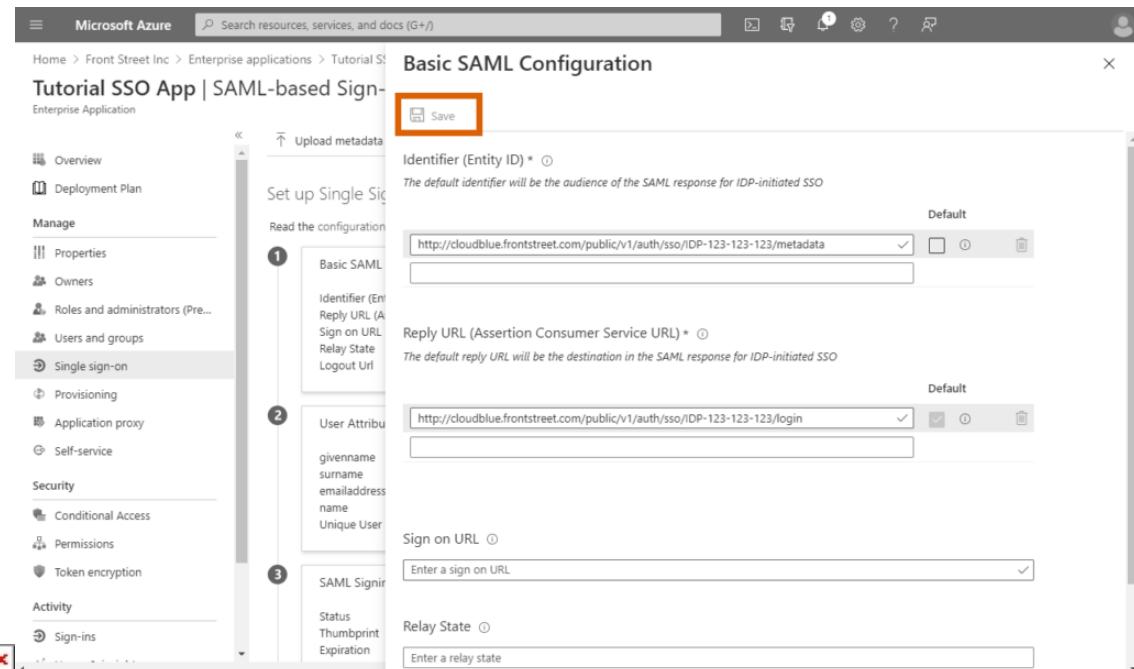

Upload metadata file

Set up Single Sign-On with SAML

Basic SAML Configuration

- Identifier (Entity ID): <http://cloudblue.frontstreet.com/public/v1/auth/sso/IDP-123-123-123/metadata>
- User Attributes & Claims
- SAML Signing Certificate

Step 6

Microsoft Azure - Tutorial SSO App | SAML-based Sign-on

Basic SAML Configuration

Save

Identifier (Entity ID) *
The default identifier will be the audience of the SAML response for IDP-initiated SSO

Identifier (Entity ID): <http://cloudblue.frontstreet.com/public/v1/auth/sso/IDP-123-123-123/metadata>

Reply URL (Assertion Consumer Service URL) *
The default reply URL will be the destination in the SAML response for IDP-initiated SSO

Reply URL (Assertion Consumer Service URL): <http://cloudblue.frontstreet.com/public/v1/auth/sso/IDP-123-123-123/login>

Sign on URL
Enter a sign on URL

Relay State
Enter a relay state

Step 7

CloudBlue Settings

Domain Details

Domain: cloudblue.com Status: Verified Default Auth Mode: Built-In

Service Provider Details

Entity ID: https://connect.cloudblue.com/saml/IDP-391-324-781/metadata

Activity

- Sign-ins
- Usage & insights

Step 9

1. Access the **Enterprise applications** section from your created Azure Active Directory.
2. Click the **Create your own application** button under *Browse Azure AD Gallery*.

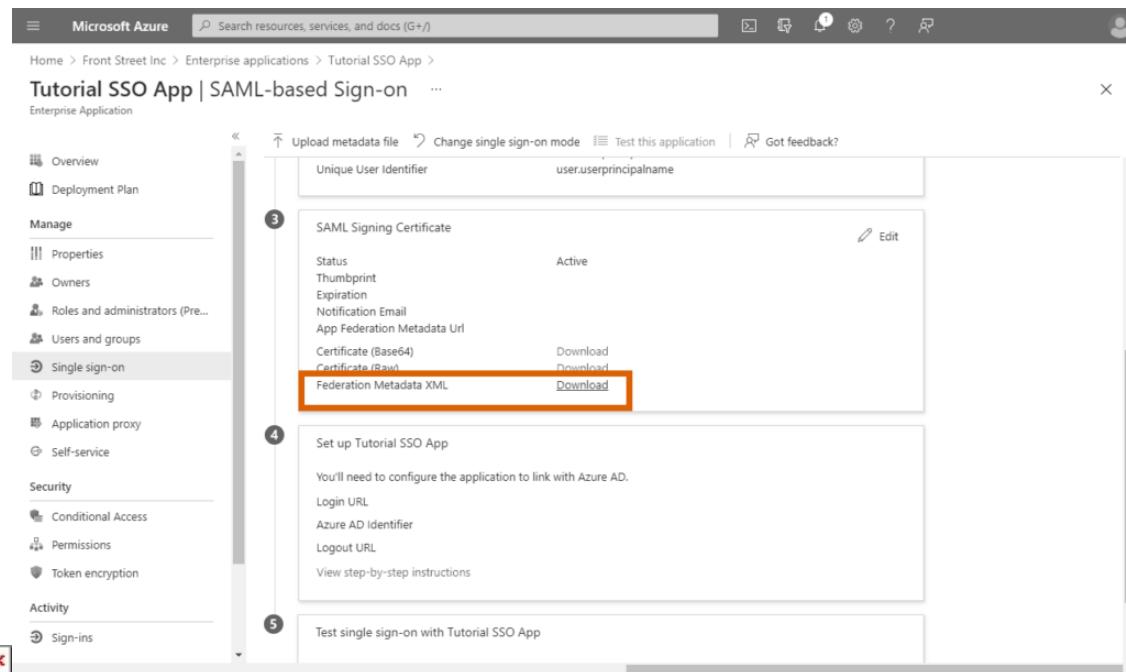

3. Enter your application name and select the **Integrate any other application you don't find in the gallery (Non-gallery)** radio option. Thereafter, click **Create** to create your enterprise application.
4. Access the **Single Sign-on** section of your created enterprise application once the system successfully processes your app.
5. Select the **SAML** option as your *Single Sign-On method*.
6. Click the **Upload metadata file** button to upload your Service Provider metadata file. Access the SP metadata file via the SAML settings tab from your verified domain on the Connect platform.
7. Once your metadata file is uploaded to the Microsoft Azure portal, click the **Save** button to save your provided metadata.
8. Access the **Token Encryption** section and click **Import Certificate** to upload your Connect certificate. Download this certificate via the SAML settings tab from your verified domain on the Connect platform. Note that Microsoft Azure requires you to get a Azure AD Premium P2 license in order to access this section.
9. Once your certificate is uploaded, activate this certificate by accessing the ellipsis (...) menu and clicking **Activate token encryption** within the Token Encryption section.

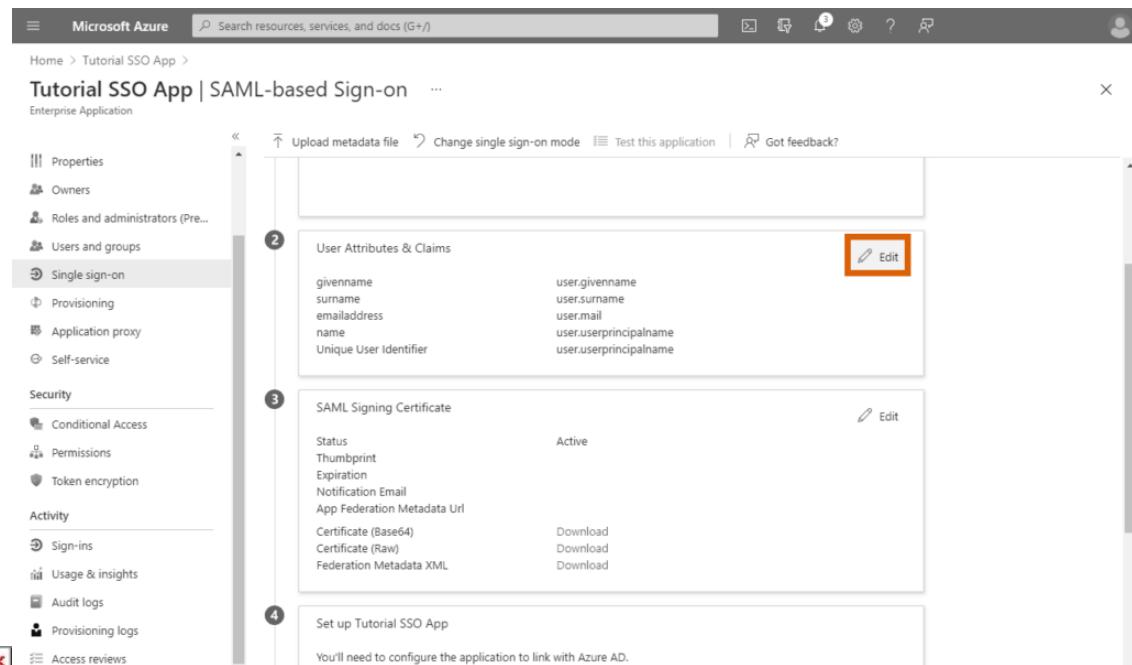

Therefore, your SSO system and the assertion encryption will be successfully configured on the Microsoft Azure portal. Note, however, that Azure's token encryption usually takes from 5 to 10 minutes to start working. Don't close your created Azure application just yet. It is required for the Connect SAML configuration as described below.

Connect SAML Configuration

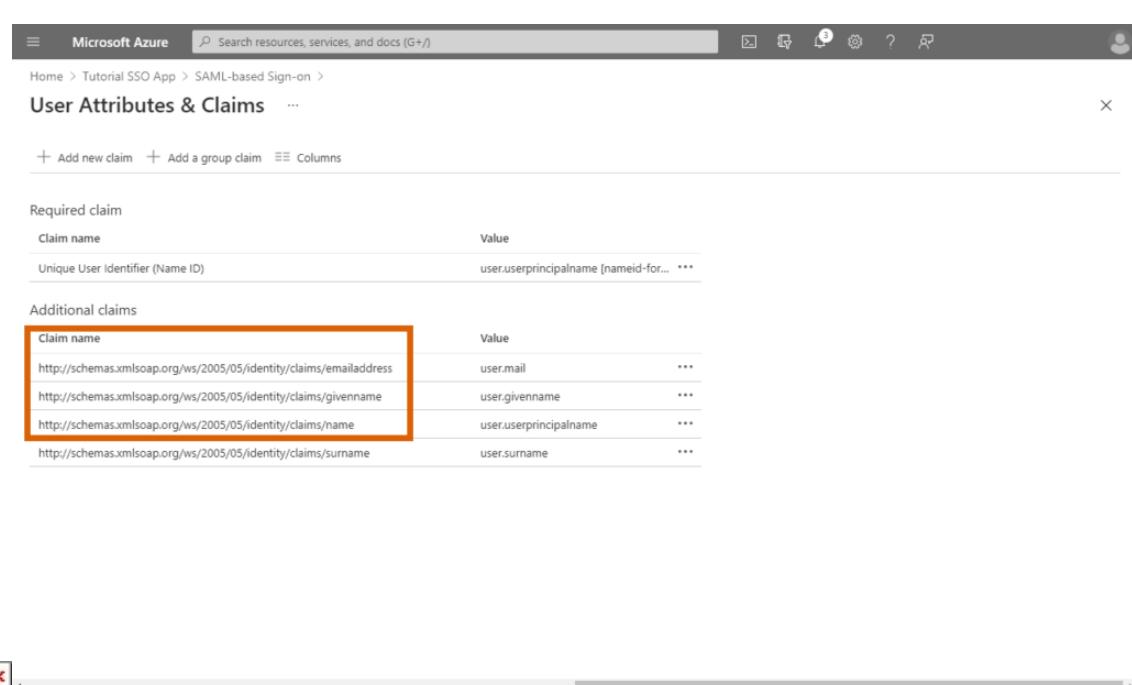

If your created application and the assertion encryption is successfully configured on the Azure portal, it is necessary to configure *Identity Provider Details* and *User Management* attributes within your verified domain on the CloudBlue Connect platform. In addition, you can switch the SAML authentication mode of your domain to test out your configured single sign-on system. Note that in order to enable this mode at least one user should be added to the *Exclusions* list. The following steps showcase how to successfully perform all of the aforementioned operations:

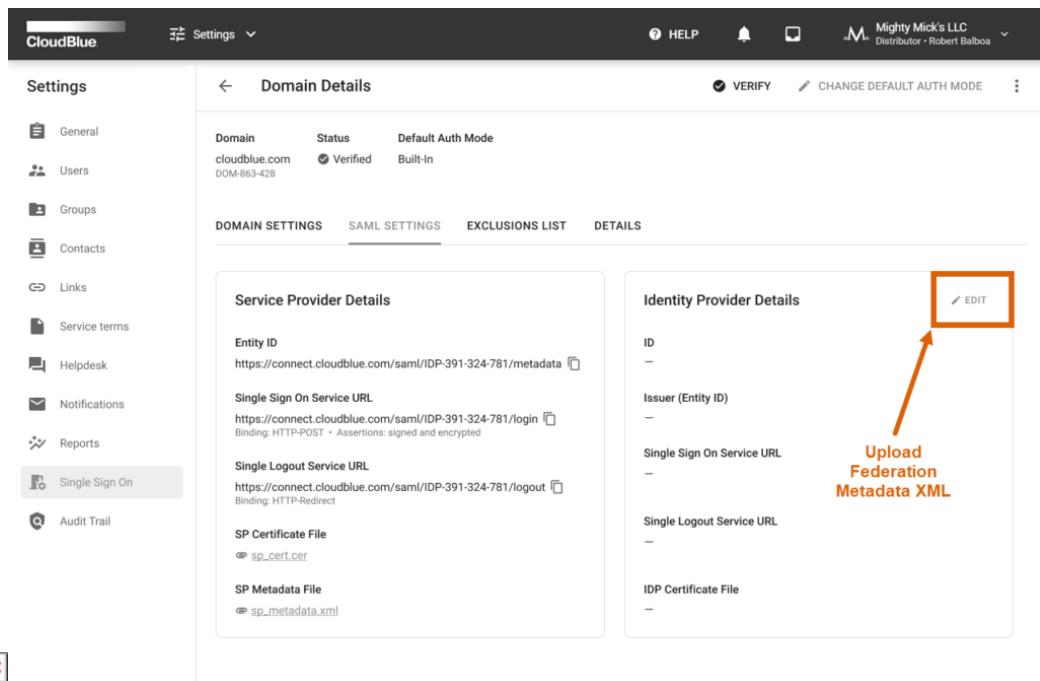

Step 1

Step 2

Step 3

CloudBlue Settings Domain Details

Domain: cloudblue.com Status: Verified Default Auth Mode: Built-In

Service Provider Details

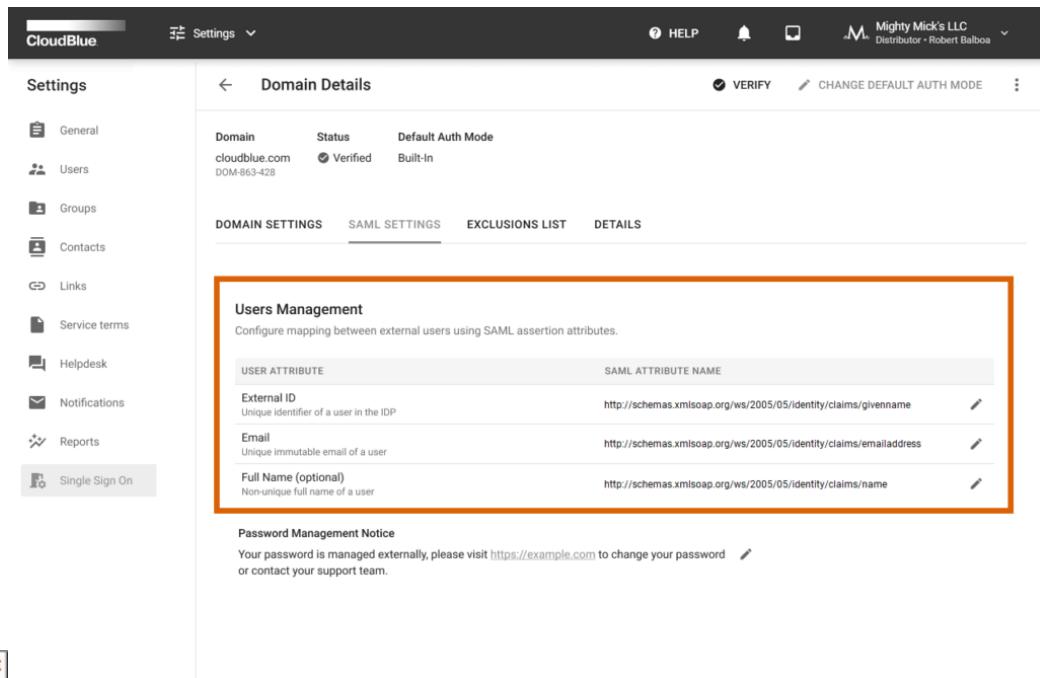

- Entity ID: <https://connect.cloudblue.com/saml/IDP-391-324-781/metadata>

Users Management

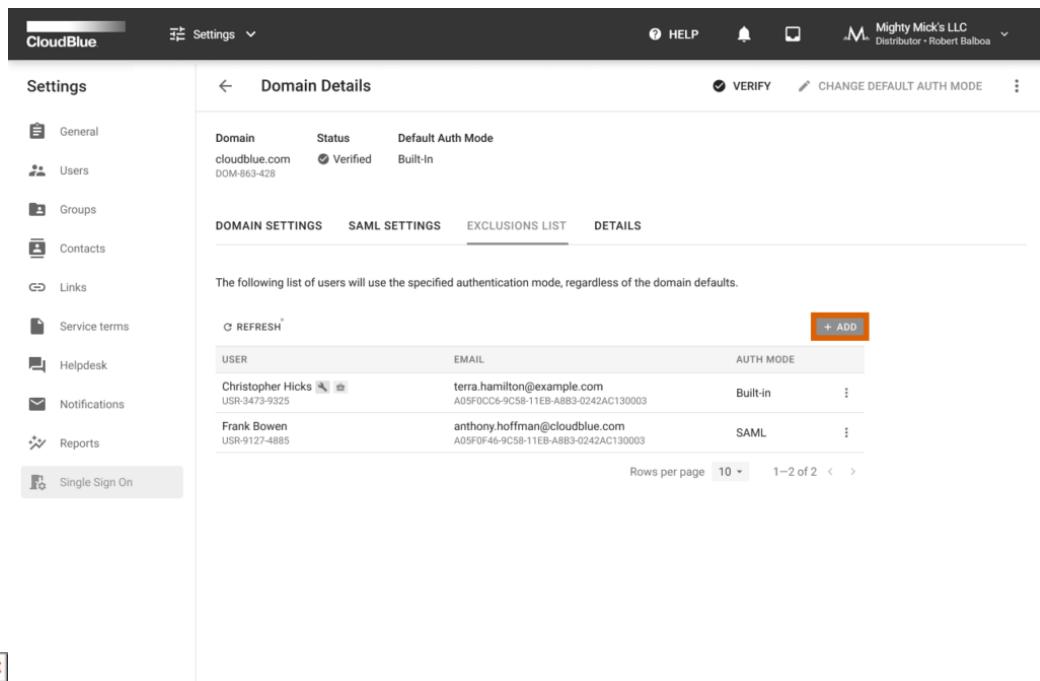

Configure mapping between external users using SAML assertion attributes.

USER ATTRIBUTE	SAML ATTRIBUTE NAME
External ID	http://schemas.xmlsoap.org/ws/2005/05/identity/claims/givenname
Email	http://schemas.xmlsoap.org/ws/2005/05/identity/claims/emailaddress
Full Name (optional)	http://schemas.xmlsoap.org/ws/2005/05/identity/claims/name

Password Management Notice

Your password is managed externally, please visit <https://example.com> to change your password or contact your support team.

Step 5

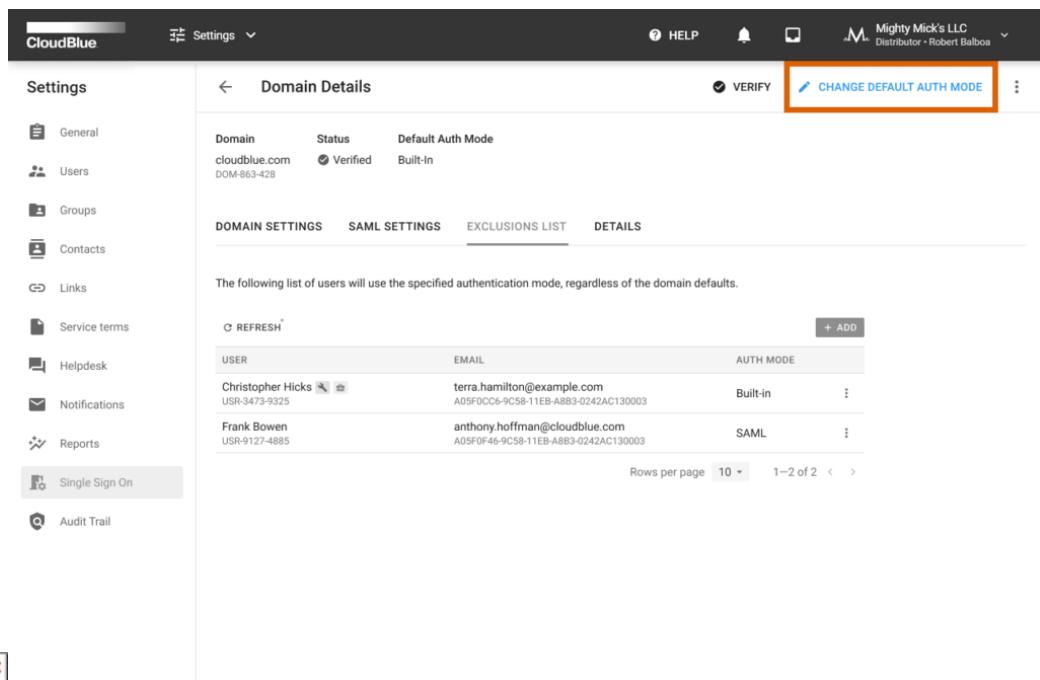

Domain Details

Domain: cloudblue.com Status: Verified Default Auth Mode: Built-In

EXCLUSIONS LIST

USER	EMAIL	AUTH MODE
Christopher Hicks	terra.hamilton@example.com	Built-in
Frank Bowen	anthony.hoffman@cloudblue.com	SAML

Step 6

Domain Details

Domain: cloudblue.com Status: Verified Default Auth Mode: Built-In

EXCLUSIONS LIST

USER	EMAIL	AUTH MODE
Christopher Hicks	terra.hamilton@example.com	Built-in
Frank Bowen	anthony.hoffman@cloudblue.com	SAML

Step 7

1. Access the **Single Sign-on** section from your configured Azure application. Thereafter, download the **Federation Metadata XML** under *SAML Signing Certificate*.

2. Scroll up to the *User Attributes & Claims* section and click the **Edit** button to access required user management attributes.
3. Copy the Azure claim names under *Additional Claims*. Namely, it is required to copy the following claim names:
Email: <http://schemas.xmlsoap.org/ws/2005/05/identity/claims/emailaddress>
External ID: <http://schemas.xmlsoap.org/ws/2005/05/identity/claims/givenname>
Full Name: <http://schemas.xmlsoap.org/ws/2005/05/identity/claims/name>
4. Access the SALM Settings tab from your verified domain on Connect. Click the **Edit** button next to *Identity Provider Details* and upload your exported **Federation Metadata XML** to the corresponding form.
5. Locate the *User Management* section of the SAML Settings tab and provide the copied claim names as **SAML Attribute Names**.
6. Access the **Exclusions List** tab of your Connect domain. Click the **Add** button to specify at least one user with the *built-in* authentication mode.
7. Click **Change Default Auth Mode** at the top-right corner of your domain details screen. The appeared wizard will help you switch the default mode to the *SAML* authorization mode.

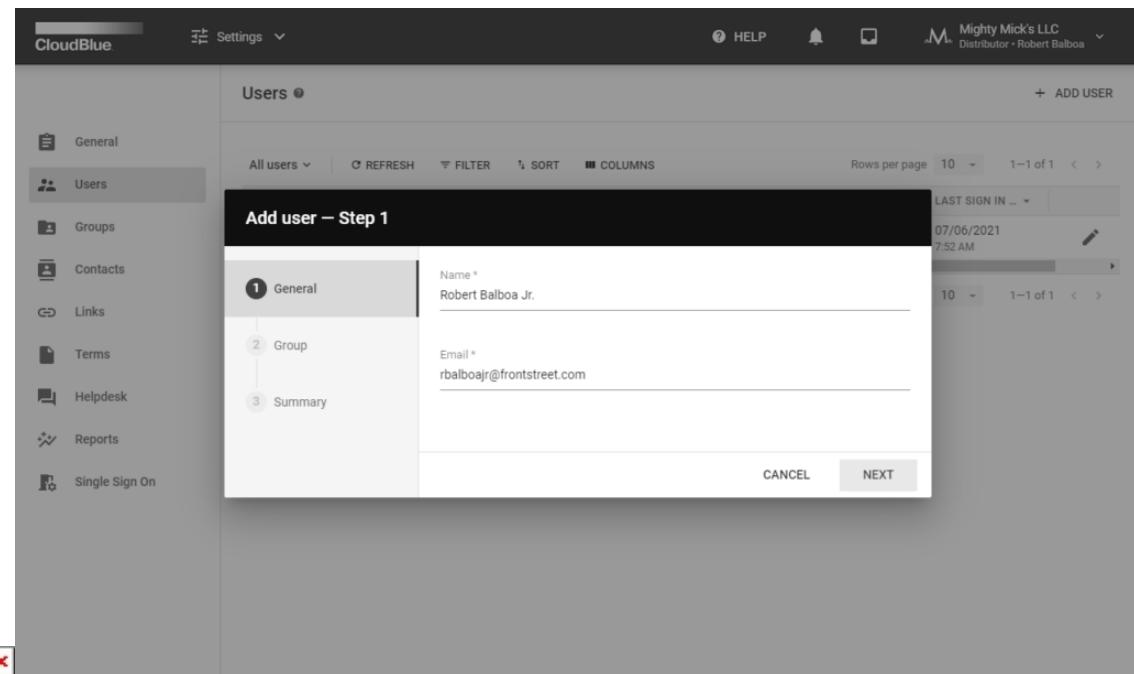

By completing the provided instruction, your Connect domain will be successfully configured for single sign-on authorization via the Azure Active Directory. Therefore, you can add users to your authorization system and test out as described below.

Adding Users and Test Authorization

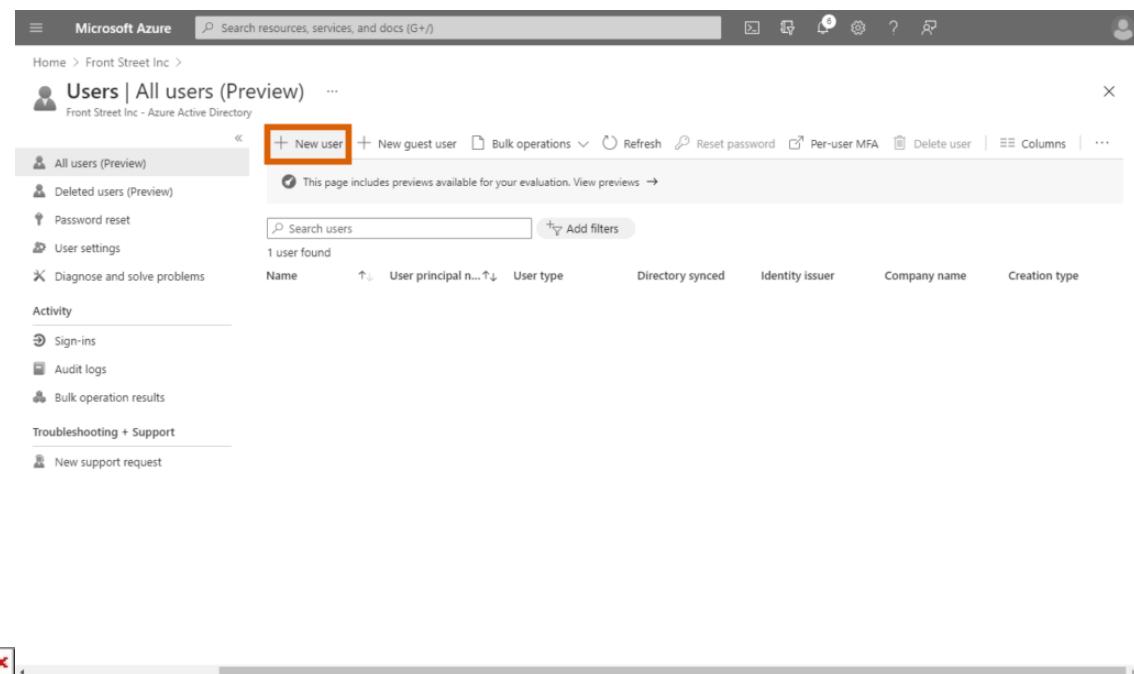

Once your single sign-on system will be successfully configured, you can create a new user on Connect and add this user to your Azure Active Directory as well as your to your configured application. Therefore, you can test out your configured SAML authorization. Follow the steps below to add a new user and test your single sign-on system:

NAME	EMAIL	AUTH MODE	JOINED AT	LAST SIGN IN
Robert Balboa	rbalboa@frontstreet.com	Built-in	07/06/2021 7:52 AM	07/06/2021 7:52 AM

Version 17.0192-2b34b3

Step 7

1. Access the **Users** section of the Account module on the Connect platform. Click **Add User** to launch the wizard and create your test user on Connect.

2. Proceed to the **Users** section from your configured **Azure Active Directory**. Click the **New User** button to add your test user with same credentials.
3. Navigate to the **Users and Groups** section from your configured *Enterprise Application*. Click the **Add user/group** to add your configured user.
4. Click on *Users and Groups* from the provided form. Thereafter, choose your user from the list and click the **Select** button.
5. Click **Assign** to successfully assign your selected user to your application.
6. Access the **Single Sign-on** section and click the Test button in case you want to test your SAML configuration. Sign in as your current user or test your application as someone else.
7. Finally, use your created user's credentials to sign into your Connect domain.

In case your single-sign on authorization system is configured correctly, the Connect platform will allow you to sign into your domain by using your specified credentials.
