Overview

The Offers Management module allows establishing and configuring offers, plans, features and groups of features. First of all, it is crucial to understand the difference between the aforementioned terms.

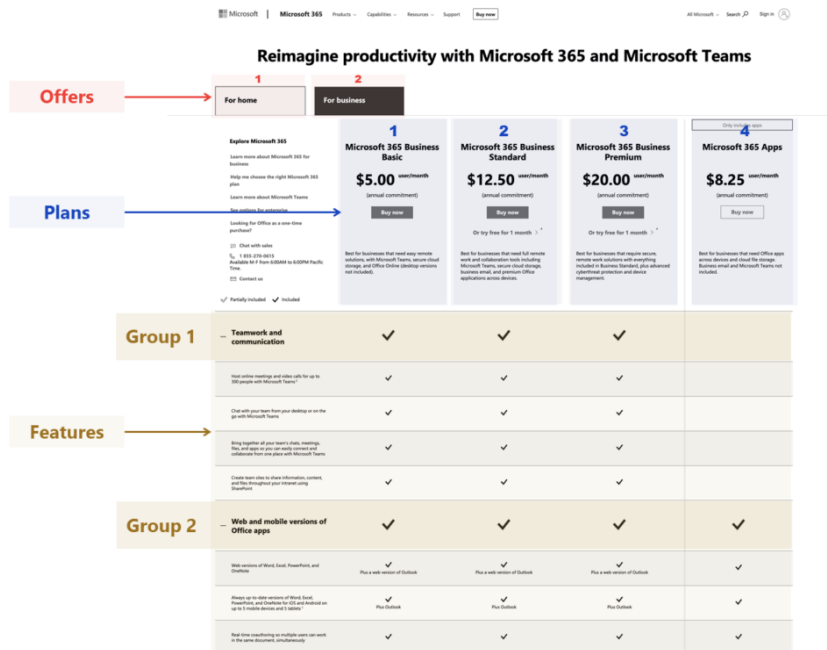

Plans and Offers

Offer is a high-level entity that acts as a logical grouping of one or multiple plans. For instance, offers may represent bundled service packages for individuals, businesses, and so on.

Plans represent service levels that provide different item quantity, product features, or billing periods. Moreover, different plans usually specify different prices, for example, a basic plan costs less and includes less features, while an enterprise plan costs more and provides more features.

The illustration below provides Microsoft 365 product page as an example that helps distinguish Offers and Plans. Furthermore, the following illustration showcases Features and Groups concepts.

The screenshot shows the Microsoft 365 product page with the following annotations:

- Offers:** Points to the 'For home' and 'For business' tabs at the top.
- Plans:** Points to the four Microsoft 365 Business plans: Basic (\$5.00/month), Standard (\$12.50/month), Premium (\$20.00/month), and Microsoft 365 Apps (\$8.25/month).
- Features:** Points to the feature comparison table below the plans.
- Groups:** Points to 'Group 1' (Teamwork and communication) and 'Group 2' (Web and mobile versions of Office apps) in the feature table.

Group	Feature	Basic	Standard	Premium	Apps
Group 1	Teamwork and communication	✓	✓	✓	
	Real-time meetings and video calls for up to 100 people with Microsoft Teams	✓	✓	✓	
	Chat with your team from your desktop or on the go with Microsoft Teams	✓	✓	✓	
	Bring together all your team's chats, meetings, files and apps in one central channel and collaborate from one place with Microsoft Teams	✓	✓	✓	
Group 2	Web and mobile versions of Office apps	✓	✓	✓	✓
	Web versions of Word, Excel, PowerPoint, and Outlook	✓	✓	✓	✓
	Always up-to-date versions of Word, Excel, PowerPoint, and Outlook (64-bit) and OneDrive for Business (64-bit)	✓	✓	✓	✓
	Real-time co-authoring on multiple users can work in the same document (simultaneously)	✓	✓	✓	✓

Features and Groups

Therefore, **Features** represent specific pieces of product functionality, while a **Group** act

as a particular set or class of these features.

Next, it is important to outline how offers can benefit Vendors and Distributors.

For Vendors: Offers provide a systematic way to store necessary information on the provided services. Namely, offers allows Vendors to visualize, group and systemize product features as well as specified SKUs (items) on the Connect platform. Thus, Distributors, Resellers and Customers can get clear understanding of Vendor's products, which in turn leads to bigger sales.

For Distributors: Offers contain systemized product data that can help Distributors properly present and successfully sell this product. Each specified offer, each plan, and each group of features enable Distributors to identify their target audience and determine their target market. For example, with an offer meant for businesses, Distributors will not target entrepreneurs or individual users.

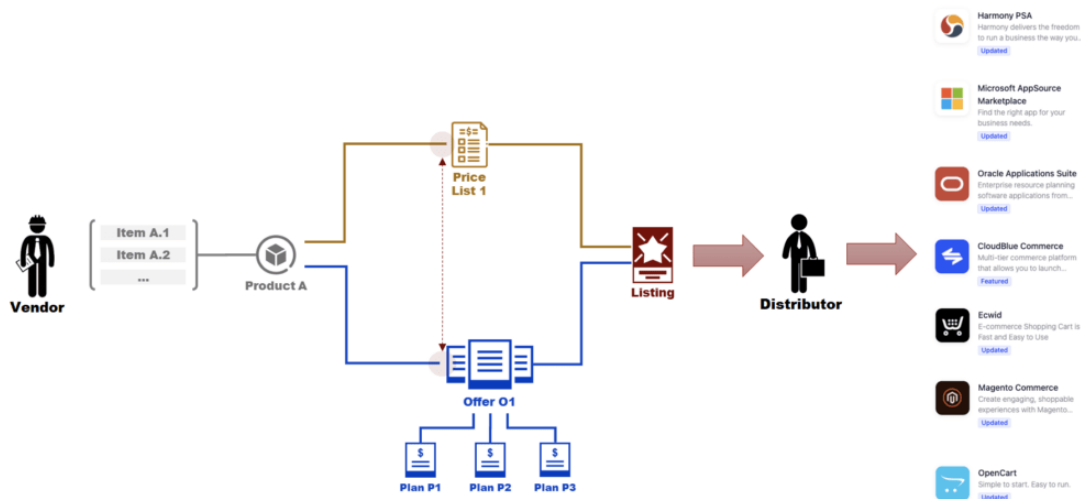

The following explains offer management concept on the Connect platform and provides guidelines on how to create an offer, specify associated features and listing, link your offers and listings, create plans, and perform other operations from the Offers module.

Offer management on Connect

Offers management is available for Vendors in case at least one Product is defined on the Connect platform.

Offers are compatible with Price Lists and they both available for the Listing creation process. Namely, Vendors can define Price lists and Offers to enroll their product on a specific marketplace.

The following diagram illustrates offers interconnections on the platform:
