Overview

The Forms Management module enables Distributors to create and manage custom forms on the CloudBlue Connect platform. These forms are used to collect additional information from Vendors to perform the following operations:

1. Request additional data before a Vendor enrolls a Distribution Agreement.
2. Acquire *Product-level* information before a Vendor submits a listing request.
3. Get additional *Item-level* information before a Vendor submits a listing request.

Custom forms can be especially helpful for acquiring necessary information for various business scenarios. Example use cases include, but not limited to the following scenarios:

- Generating an *Agreement* type form to collect banking or finance information. Such data could be essential for creating and enrolling distribution agreements that should meet your business requirements.
- A *Product* type form can be used to specify support channels for Software-as-a-Service products. Therefore, your customers can submit questions or report occurring issues to relevant support agents.
- Creating an *Item* type form to specify different phone numbers for different items (SKUs). Thus, some customers can request certain items from one phone number and get different items from another number.

The following provides instructions on how to create and attach custom forms on the Connect platform.

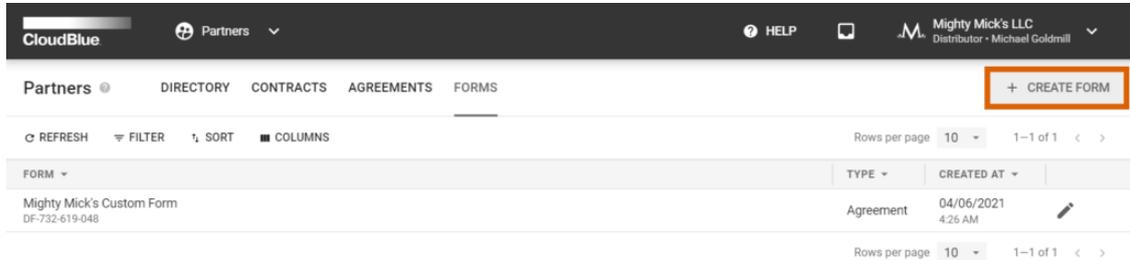

Creating forms

Create a custom form on the Connect platform by following the steps below.

1. Start creating a new form

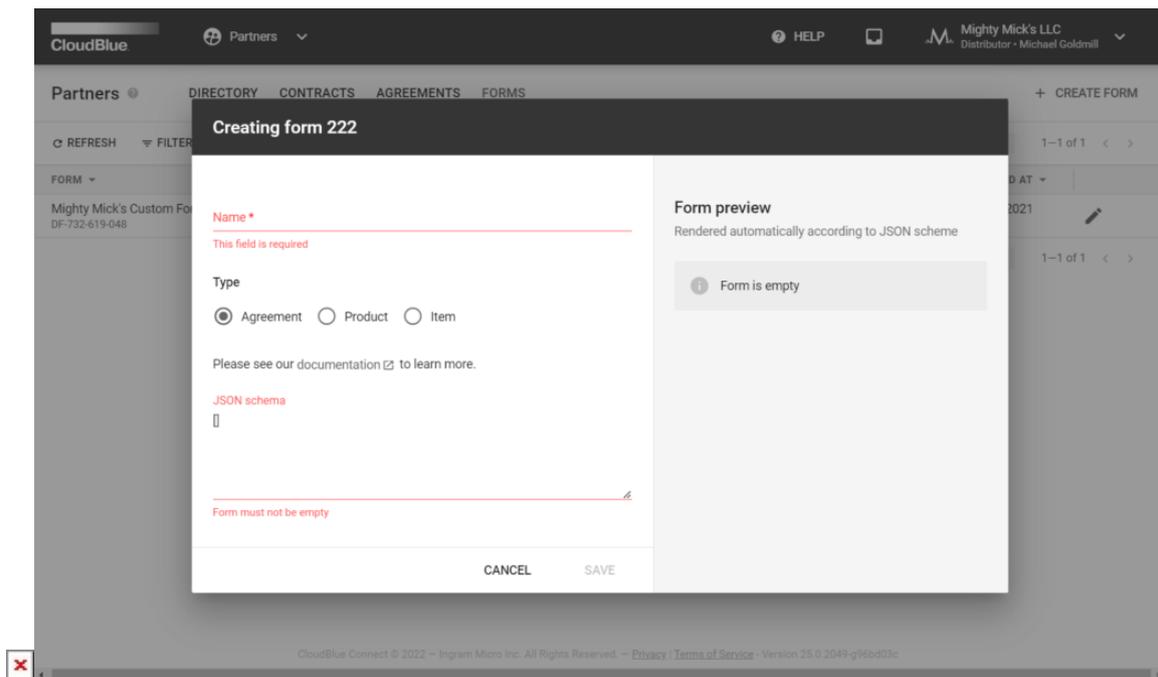

Click the **Create Form** button from the **Forms** module.

2. Define your custom form

Define your custom form within the following pop-up window:

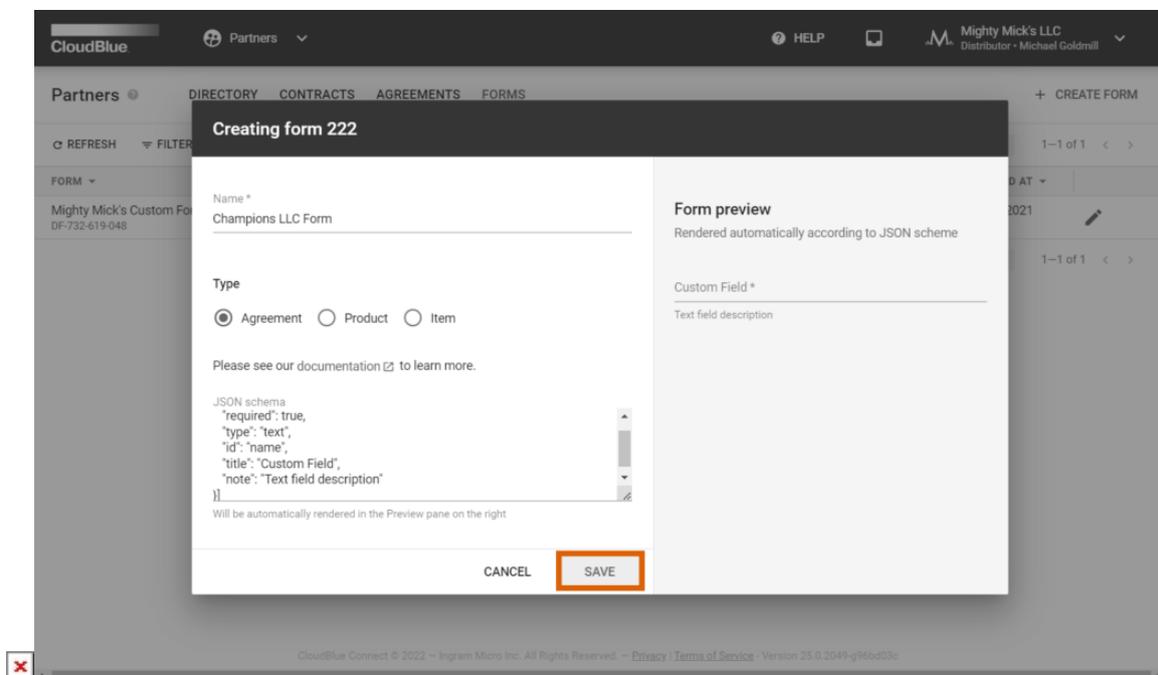

- **Name:** Enter a name for your form.
- **Type:** Specify your form type.
 - *Agreement:* Select this type to get additional data before your Vendor enrolls a Distribution Agreement.
 - *Product:* Choose this type to request more Product-related information before your Vendor submits a listing request. Thus, Distributors can get specific Product data for certain Marketplaces (e.g., specific product description)
 - *Item:* Select this type to acquire additional Items-related information before your Vendor submits a listing request. Therefore, Distributors can request specific Items data for particular Marketplaces (e.g., MSRP, detailed SKU description, Item dependencies, etc.)
- **JSON schema:** Specify your custom form via the JavaScript Object Notation format. Refer to Schema Definition below for the instructions.

CloudBlue Connect © 2022 – Ingram Micro Inc. All Rights Reserved. – [Privacy](#) | [Terms of Service](#) - Version 25.0.2049-g96bd03c

3. Save your custom form

Click the **Save** button to save your defined custom form.

CloudBlue Connect © 2022 – Ingram Micro Inc. All Rights Reserved. – [Privacy](#) | [Terms of Service](#) - Version 25.0.2049-g96bd03c

Therefore, your defined custom form will be successfully created and saved within the Forms module.

Attaching Custom Forms

Once a custom form is successfully saved, Distributors can attach custom forms within a created Distribution Agreement.

Information

Each type of your custom form can be attached to your generated distribution agreement. Furthermore, note that one custom form can be used with multiple distribution agreements.

The following steps showcase how to successfully attach your created form to your distribution agreement.

1. Access distribution agreement details

Click on your distribution agreement name from the **Agreements** tab of the **Partners** module to access the distribution agreement details screen.

AGREEMENT	TYPE	MARKETPLACES	DESCRIPTION	CONTRACTS	
Champions LLC Agreement AGP-357-565-266	Program	-	This is agreement created for Champions LLC	3	
Champions LLC Agreement (Tutorial) AGD-284-437-563	Distribution	Mick's Europe Marketplace MP-68204	This is agreement created for Champions LLC	2	

Alternatively, click on your distribution agreement name under **Distribution Agreements** from the program agreement details.

2. Navigate to Details

Switch to the **Details** tab button upon accessing your distribution agreement.

Once all forms are selected, click the **Save** button to save your attached custom forms.

Therefore, your selected custom forms will be attached to your distribution agreement. Your Vendor will be prompted to fill out your custom form before enrolling the distribution agreement and/or submitting a listing request.

Schema Definition

Custom forms are defined via the aforementioned **JSON schema** field. Each element in your custom form (input field, checkboxes, etc.) must be described as a JSON element. Connect provides the **form preview** field that facilitates and rectifies your custom form creation.

Object Fields

Each element of the form can be described using the following attributes:

Property	Type	Description	Example
id	string	Identifiers are used to refer field data in the resulting object. Should be unique, alphanumeric, lowercase, separated by underscore.	field_01
type	string	Your field type should contain one of the following values: <i>text</i> , <i>section</i> , <i>checkbox</i> , etc. (for more details, refer to Schema Definition above).	password
title	string	Titles, as the name implies, are used to specify the title of your field. Note that titles are localizable .	Field title
required	boolean	If set to <i>true</i> , the provided field should be filled in before submitting the form.	true
filter	string	Regular expression to check data for validity.	<code>/^[+]*[(]{0,1}[0-9]{1,4}[)]{0,1}[-\./0-9]*\$/</code>
meta	array	Additional data for checkbox and dropdown lists.	<code>[{ "label": "Label 1", "value": "option_1" }, { "label": "Label 2", "value": "option_2" }]</code>
custom_error	string	Custom errors are used to show your message in case provided values do not meet your filter criteria.	Email should be in format login@domain.name
value	string	Default value of your provided field. It is generally used for the description or the section schema.	Default value
note	string	Additional explanation or instructions that are specified under your provided field.	Enter your password

Form Example

Use the following form as an example for your custom form:

```
[
  {
    "id": "name",
    "type": "text",
    "title": "Name",
    "required": true
  },
  {
    "id": "section",
    "type": "section",
    "value": "Home Address"
  },
  {
    "id": "email",
    "type": "text",
    "title": "Email",
    "custom_error": "Email should be in format login@domain.name"
  },
  {
    "id": "phone",
    "type": "text",
    "title": "Phone"
  },
  {
    "id": "static",
    "type": "static",
    "title": "Static Text"
  },
  {
    "id": "password",
    "type": "password",
    "required": true,
    "note": "Enter your password",
  },
  {
    "id": "checkeable_options",
    "type": "checkbox",
    "title": "Checkable options",
    "meta": [
      {
        "label": "Option 1",
        "value": "option_1"
      },
      {
        "label": "Option 2",
        "value": "option_2"
      }
    ]
  }
]
```

```
    },
    {
      "label": "Option 3",
      "value": "option_3"
    },
    {
      "label": "Option 4",
      "value": "option_4"
    }
  ]
},
{
  "id": "chooseable_options",
  "type": "dropdown",
  "title": "Selectable options",
  "meta": [
    {
      "label": "Option 1",
      "value": "option_1"
    },
    {
      "label": "Option 2",
      "value": "option_2"
    },
    {
      "label": "Option 3",
      "value": "option_3"
    },
    {
