Item Groups

This article has been generated from the online version of the documentation and might be out of date. Please, make sure to always refer to the online version of the documentation for the up-to-date information.

Auto-generated at August 28, 2026

The **Items** section of the product profile page provides the **Groups** tab that is used to group related items into a singular group.

Both Vendors and Distributors are able to create Item Groups. Item Groups created by Vendors are also visible to Distributors that have listing of the product. However, Item Groups created by the Distributor are only visible to the Distributor.

Viewing Item Groups created by Vendors or Distributors

Distributors will have a View dropdown menu that allows their portal to display item groups created by Distributors (defined as Distributor Groups) or Vendors (defined as Vendor groups)

About Item Groups

Item Groups allows Partners on CloudBlue Connect® to group similar items within a singular group object. These items are usually transactionally related to each other – such as “add-on items”, “support items”, “free/trial items”, and other types of classifications. The grouping provides the partner and potential distributors to quickly identify any specific operational rules that may affect the “item group” as a whole.

Item Groups can be a mixture of items containing different commitment periods and billing periods to maintain maximum flexibility in item group bundling. Each item group is assigned a “Group MPN” and unique Item Group ID (prefix depending on vendor or distributor created) that allows systems to identify the item group configured.

Creating Item Groups

Within a specific product, navigate to the Items section on the left, then click the **Create Group** button to define a new item group.

The following inputs will appear to start the Item Group creation process.

1. Create Items Group

Specify the general properties:

- **Name:** Enter your item group name.
- **Group Manufacturer Part Number:** Type the desired group MPN.
- **Description:** Enter a short description of your item (optional).

Click **Save** to create the Item Group.

2. Including Items in the Items Group

Once the Item Group has been created, go into the Items Group Details and click on the Items tab. From here, any item created within the product can be selected to be included in the Group Items.

Information

Items within an Item Group can only contain Items from the same product

3. Save the items

Once all the desired items have been selected, click Group Items to complete the item grouping.

As a result, the selected items are now available within the Item Group.
