Product Localization

This article has been generated from the online version of the documentation and might be out of date. Please, make sure to always refer to the online version of the documentation for the up-to-date information.

Auto-generated at December 5, 2023

Introduction

The Localization section of your product profile page is used to generate and manage translations for your selected product. Thus, Vendors can provide translations for the product data, allow their business partners to create additional translations, and consequently reach a wider audience. Distributor and Resellers can also create translations and select an *active* translation that will be used to display required information on commerce or other external systems.

Note that Localization section requires you to specify the primary translation for a product defined on the Connect platform. The primary translation represents your generated translation object that is used to define your product specifications and other product data within the Connect portals and distribution systems.

Use the Localization section to assign primary translations, activating translation objects, adding new translations, comparing translations and perform other operations. In case more information on the localization functionality is required, refer to the Localization module documentation.

Adding Translations

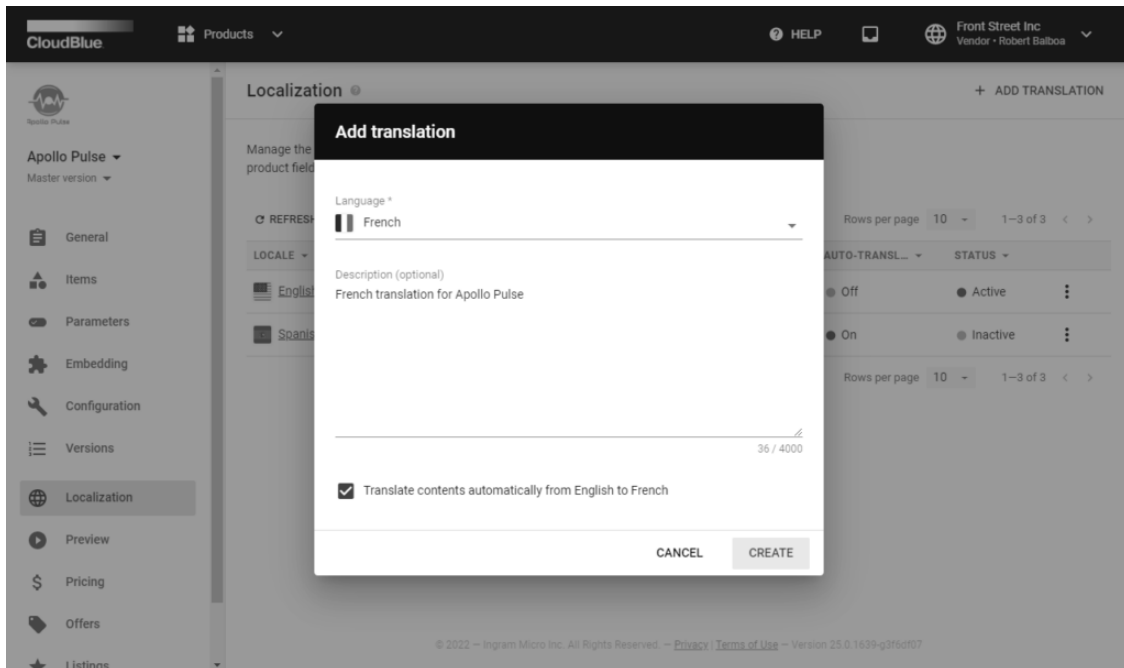

Access your product profile page and proceed to the the **Localization** section to add a new translation object. Click the **Add Translation** button to launch a translation creation wizard.

The screenshot displays the 'Localization' section of the CloudBlue interface. The page title is 'Localization' and it includes a '+ ADD TRANSLATION' button in the top right corner. Below the title, there is a brief instruction: 'Manage the localization of your product here. Define and fill supported locales, translate and manage product fields in different languages.' The main content is a table with the following columns: LOCALE, DESCRIPTION, UPDATED, PROGRESS, AUTO-TRANSL., and STATUS. The table contains two rows: one for 'English' (Primary, Active) and one for 'Spanish' (Inactive). The table also includes controls for REFRESH, FILTER, SORT, COLUMNS, and SEARCH, as well as pagination options (Rows per page: 10, 1-3 of 3).

LOCALE	DESCRIPTION	UPDATED	PROGRESS	AUTO-TRANSL.	STATUS
English	Primary Translation file	03/30/2022 4:20 AM	100%	Off	Active
Spanish	Spanish translation	04/05/2022 5:29 AM	100%	On	Inactive

© 2022 – Ingram Micro Inc. All Rights Reserved. – [Privacy](#) | [Terms of Use](#) – Version 25.0.1639-g3f6df07

Follow the wizard instructions to successfully generate your required translation:

- **Language:** Use this field to specify your required language.
- **Description:** Provide the description for your translation object on Connect (optional).
- **Translate contents automatically:** Check this checkbox to translate product attributes automatically from your specified primary language.

Click the **Add** button to generate your translation object. The system also automatically translates required product attributes in case the corresponding option is selected. Otherwise, it is necessary to provide translation values manually.

Translations Management

Once the system successfully generates your required translations, use the provided user interface to manage your translation objects.

Primary and Active Translations

Note that primary translations and active translations provide different functionality within the system:

Primary translations typically represent original product details that are defined by the Vendors. The system allows reassigning the primary translation in case it is necessary for your business scenario. Your primary translation will also be used to generate additional translations.

Active translations represent your assigned objects that present specified product details to commerce systems and other external platforms. Connect allows selecting only one active translation per a language. Inactive translations cannot be used by your business partners.

Click on the vertical ellipsis (**:**) icon to open an object menu. Thereafter, select one of the following options:

- **Compare with:** This option allows comparing your translation objects to identify and eliminate translation errors.
- **Clone:** Enables you to duplicate your translation objects.
- **Activate:** Use this option to activate your translation objects.
- **Make Primary:** Reassign your primary translation by choosing this option.
- **Delete:** Remove your translation by selecting this option. The system doesn't allow deleting your primary translation. Thus, it is required to reassign your primary translation first.

The screenshot displays the 'Localization' module in the CloudBlue interface. The main content area shows a table with the following data:

LOCALE	DESCRIPTION	UPDATED	PROGRESS	AUTO-TRANSL...	STATUS
English	Primary Translation file	03/30/2022 4:20 AM	100%	Off	Active
Spanish	Spanish translation	04/05/2022 5:29 AM	100%	On	Inactive

A context menu is open over the Spanish row, listing the following actions: Compare with..., Clone, Activate, Make primary, and Delete. The 'Delete' option is highlighted in red.

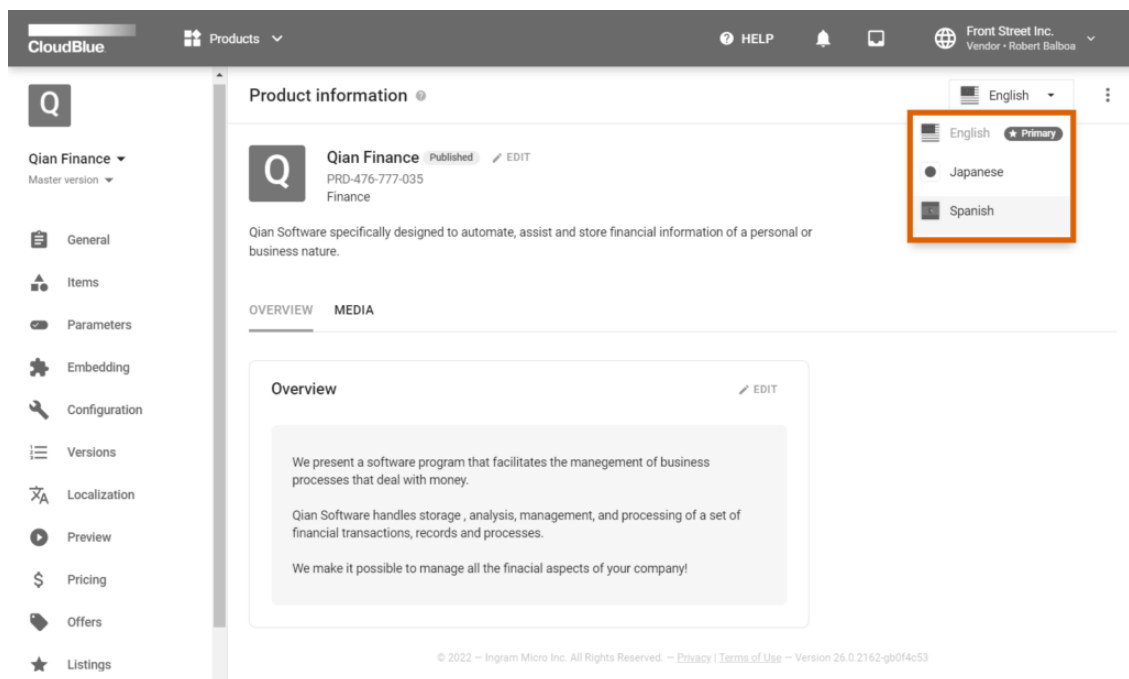

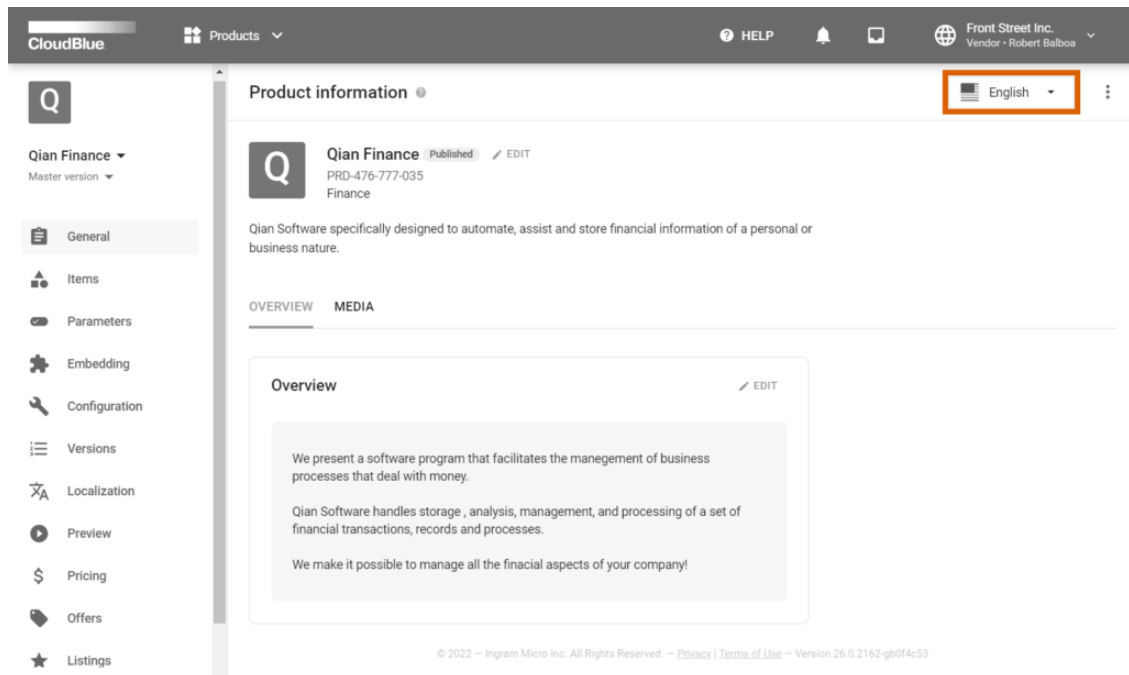

Your generated translation objects are also available for managing within the standalone *Localization* module on the Connect platform.

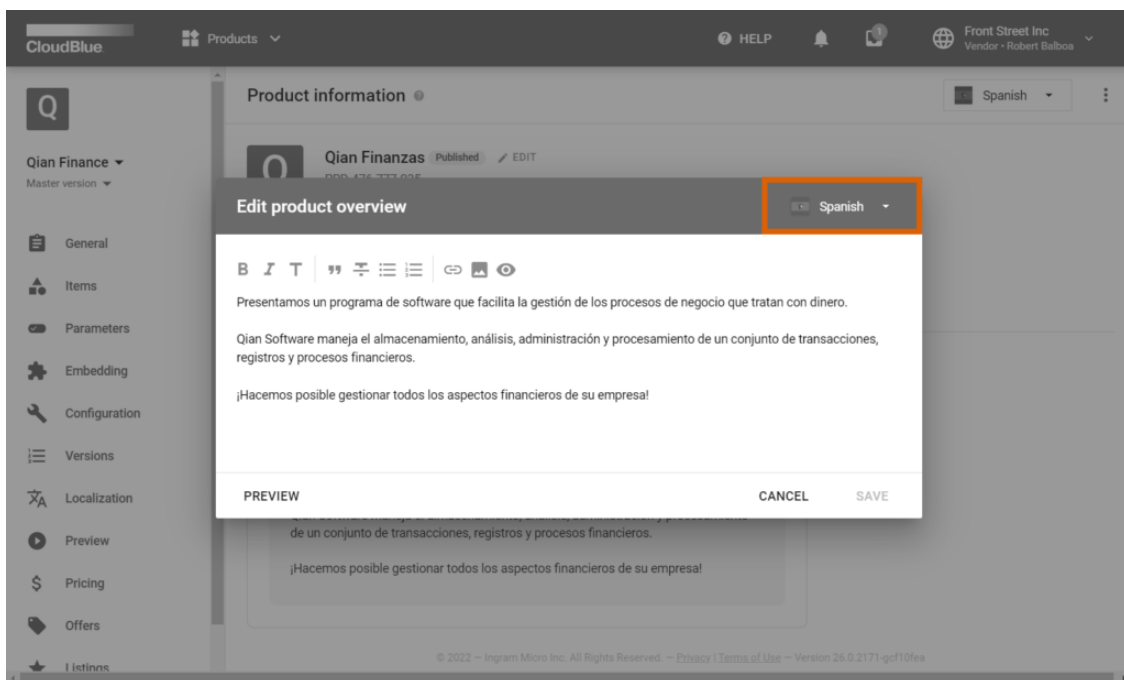

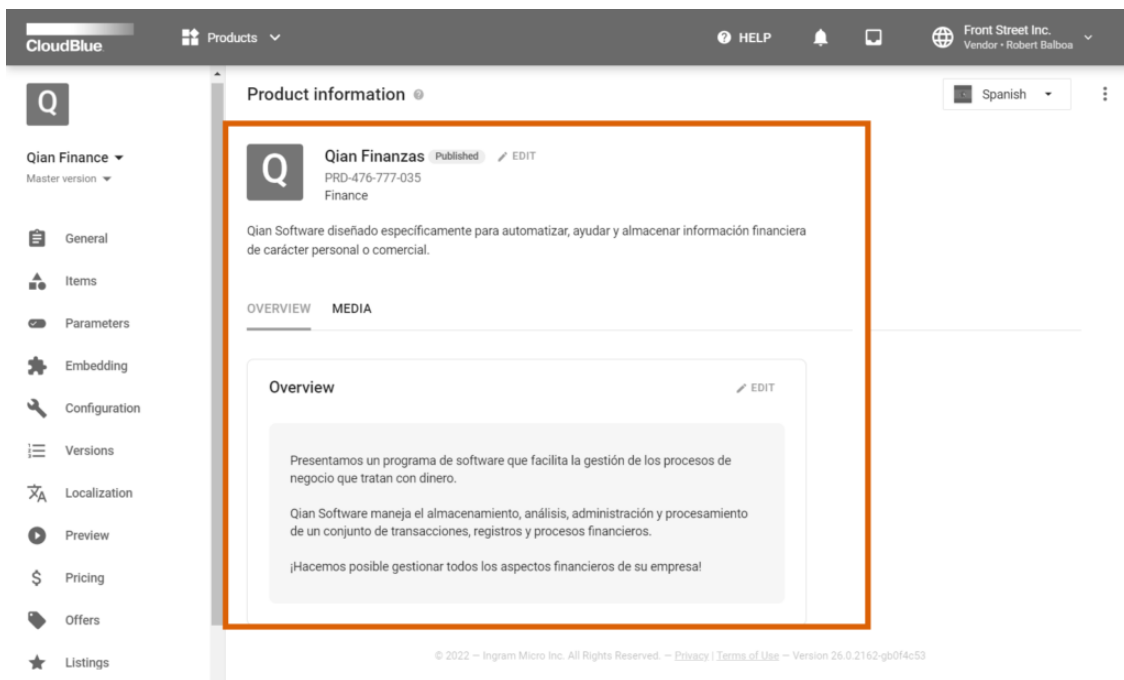

Previewing Translations

Once multiple translations are specified for your product, the system allows switching between translations to preview your

provided general product attributes, embedding templates, item information, and other localizable attributes in multiple languages.

Access any section of the product profile page that allows reviewing localizable attributes (i.e., general product attributes). Use the *translation icon* at the top-right corner of the screen to switch between your translations:

Note that localizable attributes might have different description, embedding templates, or item information as different translations. Consequently, the localization functionality allows establishing multiple brands for various regions and preview them via the Connect interface.

In addition, the system enables to use the similar icon and switch translations in the **Control Panel** tab from the subscription

details interface. Therefore, it is also possible to preview template translations from the end-customer's point of view:
