# **Subscriptions Interface**

This article has been generated from the online version of the documentation and might be out of date. Please, make sure to always refer to the online version of the documentation for the up-to-date information.

Auto-generated at October 25, 2025

The following describes available sections within the **Subscriptions** module user interface. This module is used to access and create subscription objects, fulfillment requests, and billing requests.

### **Directory**

The **Directory** tab stores a list with your generated subscription objects. Each subscription provides its own status that is regulated by fulfillment requests via the corresponding section.

Furthermore, this section contains your test or preview subscriptions. The system also allows generating subscriptions manually by clicking the *Create Subscription* button. Refer to Subscription Creation to learn more about the manual test subscription creation.

## **Subscription Details**

Click on a subscription object identifier to access the *Subscription Details* screen. As the name implies, this screen provides insights of your selected object. Note that this screen is also used to manage your subscriptions and perform various operations, such as accessing suspending subscriptions, changing the quantity of purchased items, adjusting subscription data and so on.

For more information on provided insights and available operations, refer to the Subscription Details documentation.

#### **Fulfillment**

The **Fulfillment** tab displays your order fulfillment requests. Each request object is used to manage its corresponding subscription on the CloudBlue Connect platform. Thus, it is important to understand the difference between request types and request statuses.

Refer to Fulfillment Request to learn more about such request, their types, statuses, request details. To get information on how to process your fulfillment request on the Connect platform, please refer to the Requests Management documentation.

## **Billing**

The **Billing** tab stores your billing request. Click on a billing request ID to access the **Billing request details** screen.

The Connect platform provides the following billing request types:

- **Vendor billing**: These requests are generally created by the Connect platform according to the provided scheduler. Vendors can also manually create billing requests for their preview/test subscriptions.
- **Provider billing**: Optional requests that are generated by integrated Distributor systems. Such requests are not available for Vendors.

Use the **Billing request details** screen to examine the billing period, information on purchased reservation/pay-as-you-go items, parameters data, request details, tier account data, billing attributes, and other general request information.

#### **Next Steps**

Access the following subchapters to learn more about the subscription creation process, fulfillment requests management, and other operations with subscriptions on the CloudBlue Connect platform.

- 1. Subscription Details
- 2. Subscription Creation

- 3. Requests Management
- 4. Dynamic Parameters Validation
